

NATIONAL HIV AND AIDS STRATEGIC PLAN 2005-2009

FOREWORD BY THE MINISTER

The publication of the National HIV and AIDS Strategic Plan, covering the period 2005 to 2009, is the culmination of many months of preparation by professionals in the Ministry of Health working in close collaboration with others from many different sectors. This collaborative approach emphasises the growing awareness among all partners that the challenges of HIV and AIDS can only be successfully addressed by working together. This awareness and commitment were demonstrated during the workshop to finalise the Plan. Attendance and participation by individuals from all sectors and representing a wide range of organisations will help to ensure truly national action.

The Strategic Plan addresses the realities of Seychelles and the evolving epidemic of HIV, AIDS, other sexually transmitted infections and tuberculosis. The epidemic itself, and its evolving nature, reflects the pattern of behaviour in our society. The complexities of our sexuality, our relationships, our culture, beliefs and attitudes influence the transmission of the infections, our reactions to infection and illness and whether and how we support each other, or stigmatise and discriminate. The Strategic Plan is therefore about us, and for us, as a community and a nation. In taking into account our realities and specificities, we can better devise the right approaches to tackling the epidemic and its impact.

The Strategic Plan, which will guide our interventions over the next five years, is an expression of our commitment and determination to face HIV and AIDS, not only as medical and health problems, but also to address them as cultural, social and economic issues affect all sectors of our society and every Seychellois family. Let us now, and in the years ahead, join our efforts and let us ensure that the Plan is translated into concrete, focussed and sustained action.

Patrick Pillay
Minister of Health
December 2004

EXECUTIVE SUMMARY

HIV and AIDS remain among the most significant development challenges today and clearly there is still much to be done to slow down the spread of the infection, and deal with the consequences of AIDS. Fortunately, the experience of responses to the pandemic over the past twenty years has shown that there are many approaches that either work or probably work

The Seychelles' response to the pandemic dates back to 1987 when the first HIV infection was detected. This includes a short term plan of 1987 to 1988, a medium term plan of 1989 to 1993, thereafter ongoing annual plans, and a strategic plan for HIV/AIDS/STIs in 2001. The surveillance of the epidemic is conducted at sentinel points of Communicable Disease Control Unit, antenatal clinics, Occupational Health Unit and the blood bank in the Ministry of Health and reveals that there is an increasing trend in HIV infections. As at June 2004, 188 persons have been tested positive for HIV infections and 51 patients have already died of AIDS. Though the number appears to be low, the potential for an outbreak is present. Several risk factors have been associated with increased risk of HIV infection.

The current HIV/AIDS programmes aim at the primary prevention of HIV infection, and the provision of care and support to those already infected or affected. These encompass sensitization and education through IEC activities, PMTCT, VCT, surveillance, blood screening and safety, accessibility to post exposure prophylaxis, provision of ARVs, treatment of opportunistic infections, and support of PLWHAs.

A KAP study conducted in 2003 among the general population aged 15 to 65 years revealed that even if the knowledge base on HIV/AIDS and STIs was high, negative attitudes related to discrimination of people infected or affected with HIV/AIDS still prevail, and behaviours in relation to HIV/AIDS were risky. Of those who reported having sex with commercial sex partners only 32% used the condom.

All the aforementioned findings reported above form the basis on which the National Strategic Plan was developed. With the assistance of UNAIDS, WHO, UNDP, Indian Ocean HIV/AIDS Initiative and the AIDS Division of Ministry of Health in Mauritius, the 2001 Strategic Plan was revitalised. A three-day workshop in August 2003 brought together representatives from various ministries, NGOs and FBOs. During the formulation process, five key points were considered.

- **Focus** – ensuring that interventions are targeted to individuals and groups that have the most significant effect on the epidemic dynamics. The age group 15 to 34 has been selected with special attention of the CSWs and MSM.
- **Coverage** – ensuring that as many key people and groups as possible are reached. In the development of the plan, a broad based multisectoral and multidisciplinary approach was used to develop effective and collective responses.
- **Quality** – in using a wide based approach contextual situations and group norms have been considered.
- **Sustainability** – this issue has been seen as crucial in ensuring successful political, financial and technical support by all sectors of society in the implementation of short, medium and long term interventions
- **Impact** – due attention has been given so that there is a balance of focus, coverage, quality and sustainability, thus maximizing the potential impact.

For implementation of the Strategic Plan the existing structures were revisited with the creation of a more efficient institutional framework. The NAC will be a legislative multisectoral body functioning at the highest level with the President or Vice-President as Chairperson. An Annual National Forum, chaired by the Principal Secretary of Health, also multisectoral and multidisciplinary, will have the overall responsibility to suggest and recommend plans of action and advise the NAC on issues relating to HIV/AIDS.

Other structures will function at district and sectoral levels as District Consultative Committee and Sectoral Working groups respectively. The former already exists and the institutional framework proposes that HIV/AIDS becomes a standing agenda item to discuss and report on strategic issues of national and district importance. They will be responsible for the implementation of programmes and projects. The nucleus of the framework will be the NAC Secretariat, which will bring issues to NAC and Annual National Forum.

Financial and human resources have generally been major constraints in implementing any plan. Accordingly, human, financial, material and technological resources have been taken into consideration in the costing and budgeting of the National Strategic plan. A total of US\$ 20,000,000 reflects the overhead costs. This will be shared amongst the Government through its regular budget for goods and services, the private sector, NGOs, the civil society and other institutions through resource mobilization.

The National Strategic Plan was validated at a one day workshop by all stakeholders on 26th October 2004. It was then submitted to Cabinet.

1 INTRODUCTION

During the last two decades, the HIV pandemic has entered our consciousness as an incomprehensible calamity. AIDS has claimed millions of lives, inflicting pain and grief, causing fear and uncertainty, and threatening the world economy.

According to recent statistics by the Joint United Nations Programme on HIV/AIDS (UNAIDS) and the World Health Organisation (WHO), the impact of the epidemic on the economy is already being felt in most countries. Life expectancy has been significantly reduced as many people in the 15-49 years age group are now dying of AIDS.

The national strategic plan is intended to guide the country's response to the epidemic. It is not a plan for the health sector specifically as no single sector, will by itself overcome the HIV/AIDS epidemic. All government departments, organisations and stakeholders will use this framework as a basis to develop their own plans thus ensuring a well coordinated effective and efficient response.

At the dawn of the new millennium on 8th September 2000, 147 heads of state and government representing 191 nations, resolved to, by the year 2015, halt, and begin to reverse, the spread of HIV/AIDS, the scourge of malaria and other major diseases that afflict humanity; and to provide special assistance to children orphaned by HIV/AIDS (United Nations Millennium Declaration para. III.19).

On 25th – 27th June 2001, Heads of States and representatives of governments met at the United Nations General Assembly Special Session (UNGASS) dedicated to HIV/AIDS. The historical meeting recognising the HIV/AIDS epidemic as both a security and development problem highlighted that the HIV/AIDS situation is **urgent**, a '**global crisis**' requiring '**global action**' and unprecedented global commitment and mobilisation. The Declaration of Commitment on HIV/AIDS agreed by 189 countries, is a clear statement by governments of what they are committed to accomplishing by taking action through strong leadership at global, regional and national levels.

At national level, governments committed themselves to

- *By 2003, implement multisectoral strategies and finance plans that: confront silence, denial, stigma and discrimination; involve civil society, business, people living with HIV/AIDS, vulnerable groups, women and young people; are resourced as much as possible by national budgets; address human rights, gender, age, risk, vulnerability, prevention, care, treatment, support and reduction of impact; and strengthen health, education and legal systems (Declaration of Commitment on HIV/AIDS para. 37.).*
- *By 2003, integrate prevention, care, treatment, support, and mitigation priorities into development planning (Declaration of Commitment on HIV/AIDS para.38.).*

2 CONTEXT

Seychelles is one of the countries committed to taking action against HIV and AIDS.

The Ministry of Health leads the HIV/AIDS fight since the detection of the first case of HIV infection in 1987. Government commitment has been expressed through the creation of the national AIDS programme, adoption of a National Policy endorsed by the President, creation of the National AIDS Council and National AIDS Trust Fund, funding of activities by government and external resources, and adherences to international convention and principles including the UNGASS declaration. However, currently the fight is still mainly perceived as a health issue and the need for a significant move to a multisectoral approach cannot be overemphasized.

HIV/AIDS presents a real and surmountable challenge for Seychelles. Despite its status as middle-income country, and small island state, the HIV/AIDS situation in Seychelles requires continued attention from both its government and the international community. The pandemic will not only have a social impact but also an economic impact at the individual and national levels as the country will most feel the brunt of providing medical care for those infected, and losing human resources (especially those who are economically active).

2.1. Demography

The estimated mid-year (2003) population for Seychelles was 79,879. Adult (15-64 years) population of the same time was 53,180 (67%). The male:female ratio at all ages in 2003 was 91:100. The Total Fertility Rate in 2003 was 2.04. The mean age of childbearing was 26.5 years and the mean age at first marriage was 32 years for male and 30 years for female.

2.2. Political System

Seychelles is a multiparty democracy politically divided into 25 districts, with central government led by a President. State-appointed district administrators, accountable to the Ministry of Local Government, deal with social and economic issues at district level. Elected Members of the National Assembly bring forward debates for policy discussion and decision-making by the National Assembly. The Ministry of Finance allocates funds across ministries and sectors according to priority needs.

Relatively high political commitment exists in Seychelles for HIV/AIDS (Global Fund Technical Review Panel 2003). For example, the President contributed to the Foreword of the National AIDS Policy, which was endorsed by the Cabinet in December 2000. The National AIDS Council created in 2000, has representatives from key ministries namely Finance, Education, Health, Employment and Social Affairs, and Foreign Affairs and regularly reports to the Cabinet, advising the Government on HIV/AIDS national strategies and interventions, in accordance to the national policy. The National AIDS Trust Fund was gazetted by the Vice President and Minister of Finance and is chaired by the Principal Secretaries of Health and Finance.

2.3. Economy

Seychelles' economic and social progress since independence has been very remarkable. Accounting to the Human Development Report (2003), Seychelles is currently ranked 36th in the world. However, the economy is very vulnerable due its dependence on two main sectors, tourism (directly contributes 10% to 15% of GDP and two-thirds of foreign exchange receipts) and fisheries,

which provide the bulk of national income as well as foreign exchange. Tourism especially is very sensitive to changes in the international economic and political environment. Furthermore, the economy of Seychelles is, to a very large extent, dependent on imports.

According to the 2002 preliminary Population and Housing Census, 86.9% of households have access to piped water, 97.1% to electricity, and 87.5 to flush toilets. About 90% of homes have television, 71% a fixed telephone line and 21% cellular telephone.

The country has been able to achieve relatively high levels of GNP per capita, which rose from US \$ 6,000 in 1994 to over US \$ 8,000 in 2001. However, significant social and economic progress has not led to a total elimination of poverty in the Seychelles. For most of the population, wages and salaries are the most important sources of income (74%), followed by pensions and social security benefits (16%) and self-employment (8%) (Household Income Expenditure survey 199-2000). However, recent economic trends saw the foreign exchange earning not being adequate to sustain the current development momentum, import requirements and the servicing of debt. In a bid to address the situation, the country implemented a "Macro-Economic Reform Programme" in July 2003.

2.4. Health services

Seychelles has a comprehensive health structure, which comprises of 1 central referral hospital, 3 cottage hospitals, 1 rehabilitative hospital, 1 mental hospital, 1 youth health centre and 16 district health centres located throughout the country with a decentralised system of providing basic health services in the community. Equity is a fundamental principle behind the financing and organization of health care system in Seychelles. Government-funded services are free of charge to every citizen and are complemented by a private service system. For 2003, life expectancy at birth was 70.3 years (65 for males and 75.9 years for females) and infant mortality rate was 16.6 per 1,000 births. The whole population has access to basic health care, and yearly immunization coverage against the most common childhood diseases is almost 100%. In 2003, the child mortality rate was estimated at 0.5 per 1,000 children aged 1-4 years compared to 1.1 for 1990. In 2003, the Crude Death Rate was 8.3 per 1,000 population and Maternal Mortality Rate 53.3 per 100,000 live births.

2.5. Law and Human Rights

Seychelles has a policy of all persons to have equal access to prevention and care. The Constitution makes provision for any law, programme or activity, which has as its object the amelioration of the conditions of disadvantaged persons or groups. All research protocols involving human subjects are reviewed and approved by an Ethics Committee. Except for Article 27 of the Constitution, there are no specific laws or regulations that provide against discrimination on any grounds as is otherwise necessary in a democratic society. Homosexuality, commercial sex work and drug abuse are illegal in Seychelles. Social offences, for example, failure to honour payment ordered by Family Tribunal, are punishable by imprisonment.

2.6. Migration, mobility and displacement

There are two types of mobile population entering into Seychelles: tourists and migrant workers. The former stays in Seychelles for a few days or weeks and the latter stays in Seychelles a few years. During the year 2003, 122,038 visitor arrivals were recorded. On the other hand, an average of 6,000 people arrives in Seychelles every year to work in various industries eg construction, fisheries. Seychellois in general travel considerably, and move out of the country for study, business and as tourists. In 2003, there were 1688 long-term departures and 33 378 short-term departures among Seychellois.

2.7. Ethnic and Cultural Background and Religion

Seychelles is a multi-ethnic society, which has its origin on the three continents: Africa, Asia and Europe. The main religion is Christianity and other major religions represented include Hinduism and Islam. Religious belief is respected and seems to have strong influence to the people's values and daily practices. The associations related to religious groups are many and active in social and educational activities.

2.8. Education

Education is free from pre-primary to secondary, and subsidized for tertiary schooling. In general, Seychelles enjoys an estimated 91,5% of adult literacy rate. In 2003, there were 26 primary schools, 3 of which were privately-owned and of the 13 secondary schools, 3 were privately-owned. Post-secondary academic, technical or vocational education is offered in 9 institutions. All children between the ages of 6 and 14 years are enrolled in school.

3 THE STRATEGIC PLANNING PROCESS

All previous HIV/AIDS plans were driven solely by the health sector. As it became clear worldwide that HIV/AIDS is not only a health problem but also a development crisis, the need for a multisectoral approach became more evident.

The development of the National Strategic Plan was initiated by the Government of Seychelles in early 2001 with a view to involve all sectors of society in the fight against HIV/AIDS. However, it was mostly health-driven. With the formation of the NAC in May 2002, the strategic process was facilitated and the draft has been reviewed and amended by a multisectoral team. The process was designed in respect to the UNAIDS guidelines on strategic planning and lessons learned. The process benefited from appropriate technical and financial support from UNAIDS, WHO, UNDP, Government of Mauritius and the Indian Ocean Initiative against HIV/AIDS.

Guidance was obtained through a steering committee comprising of representatives of different ministries and organisations. The situation and response analyses were further facilitated by information based on interviews of relevant stakeholders and review of existing documents. These analyses enabled to identify vulnerability and risk factors, and priority areas for interventions.

The formulation process started during a multisectoral workshop from 12th –15th August 2003. For each priority area, strategic objectives, with target activities, opportunities for implementation and key implementing bodies were identified. Strategies were prioritized in relation to acceptability, feasibility, technical soundness and impact. It was also stressed on the importance of the flexibility of the plan. The workshop was facilitated by the UNAIDS Regional Programme Adviser, WHO Liaison Officer, UNDP/UNAIDS Programme Manager and the National HIV/AIDS Coordinator in Mauritius, who also guided the team to draft the document.

The National Strategic Plan was validated by all stakeholders during a multisectoral workshop.

Due attention was paid to the following key principles of strategic planning:

- Participatory approach which ensures full involvement and ownership by all relevant stakeholders;
- Determinants-driven planning;
- Prioritisation of problems and strategies based on analysis of trends and current status of the epidemic and the response;
- Relevance to the Millennium Declaration Goals and particularly to the UNGASS Declaration.

The process can be summarised in the following major steps:

- a) Formulation and implementation of the National Policy framework which trigger multisectoral mobilisation;
- b) Resource mobilisation including technical resources;
- c) Information gathering including sectoral reviews and surveys;
- d) Preliminary draft of the national strategic plan by the MOH;
- e) Prioritisation and planning workshops at national, sectoral and community levels;
- f) Costing and Budgeting;
- g) Consultation at political and national levels;
- h) Approval by the cabinet;
- i) Dissemination to all stakeholders.

4 THE SITUATION ANALYSIS

4.1. Current trend of HIV and AIDS epidemic in Seychelles

The data currently available have been compiled from the records of the Communicable Disease Control Unit to which suspected cases from all health facilities are referred for confirmation and case management. These facilities include antenatal clinics, the blood bank, the Occupational Health Unit, hospital services, district health centres and private clinics.

The rate of HIV prevalence has multiplied by 25 in 16 years between 1987 and 2003 (0.44 per 10 000 in 1987 to 10.89 per 10,000 for the year 2003). The number of AIDS cases per 100,000 population has increased almost three-fold between 1993 (0.97) and 2003 (2.75).

4.2. Epidemiological situation of HIV and AIDS epidemic in Seychelles

4.2.1. Introduction

The first recorded HIV infected person in Seychelles was diagnosed in 1987 and the first recognized full-blown AIDS case was reported in 1992 ⁽¹⁾. Figure 1 shows the cumulative number of HIV infections, AIDS cases and related deaths since the beginning of the epidemic in Seychelles. As at June 2004, 65 patients had been diagnosed with AIDS, while 188 persons were recorded as having been tested positive for HIV infection. Furthermore, 51 persons had died of AIDS related diseases in Seychelles. Antiretroviral therapy has been made available free of charge since August 2002 and currently 35 patients are on HAART.

These figures probably represent only a small proportion of the HIV/AIDS cases that have occurred in the country. An anonymous unlinked HIV prevalence study conducted in 2001 among a population of 1,000 aged 15 to 65 years at sentinel sites (ANC, CDCU, hospital wards, OHU, Blood Bank, SPDF) gave an estimated prevalence of 0.1%. There is a need to strengthen and sustain the surveillance system in order to estimate the magnitude and trends of the epidemic in the country.

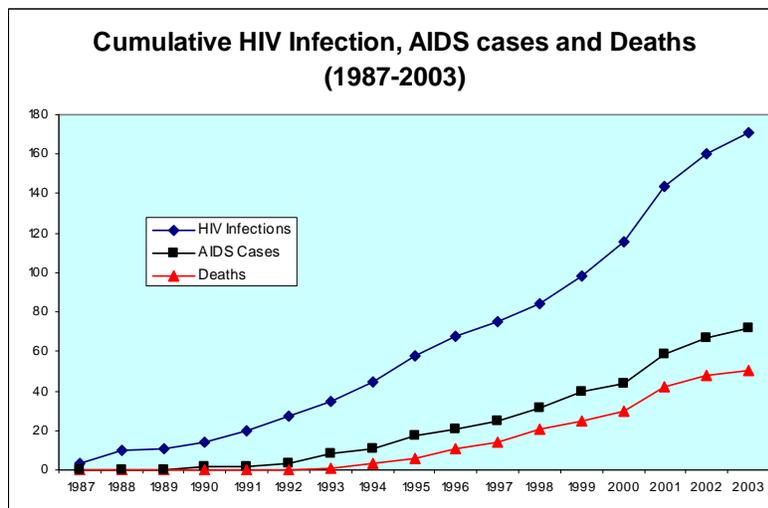

Figure 1. Cumulative number of HIV infections, AIDS cases and related deaths (1987-2003)

4.2.2. Distribution by Age, Sex and Occupation

Figure 2 shows the HIV distribution by age and sex from 1987 to end 2003. The current male: female rate is 1: 0.8. As in most of the countries in the region, the age group 15-49 years old is the most affected (89 %) [see Figure 3]. However, there are more infected girls (15-19 years old) and women (25-29 years old), compared to men. The peak age for males is 30-34 years old. Approximately 5 % of the HIV diagnosed cases are among children below 9 years old.

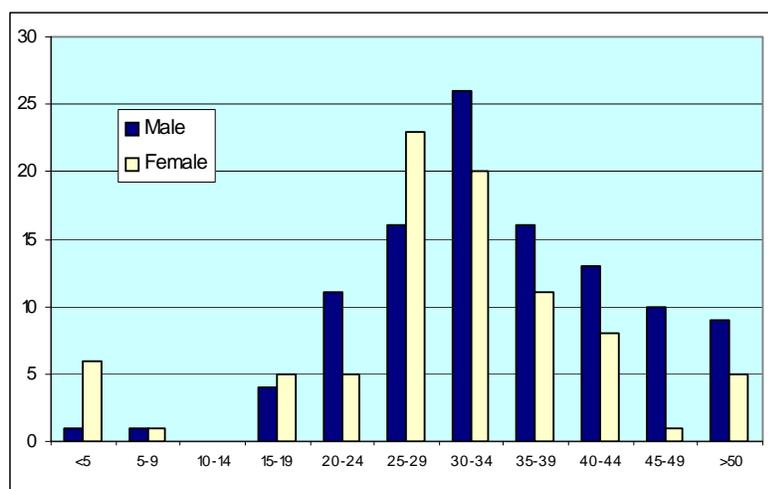

Figure 2. HIV distribution by Age and Sex 1987-August 2004 (n=192)

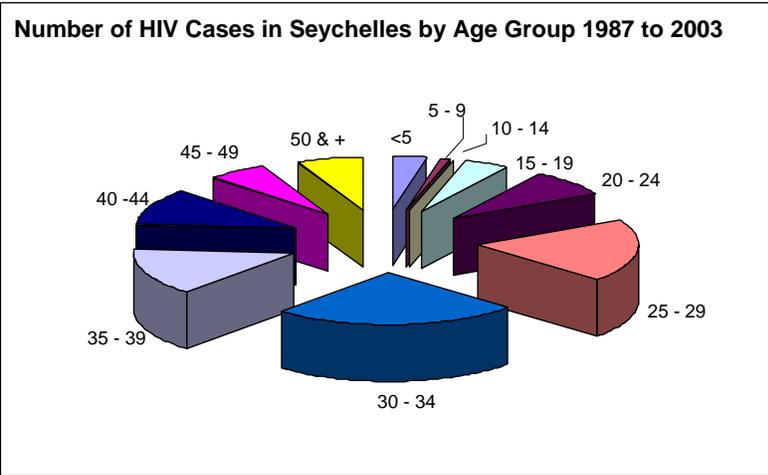

Figure 3. Percentage of total HIV reported cases by age group 1987-2003

As at June 2003, approximately 28% of AIDS associated deaths were in skilled workers, 23% in professionals, 26% in unskilled persons and 23% unemployed or of unknown employment. Among the reported deaths, the most affected age group has been the 20-44 years, the reproductive and most economically productive population.

Figure 4 shows mortality due to AIDS related causes in Seychelles from 1987 to 2003.

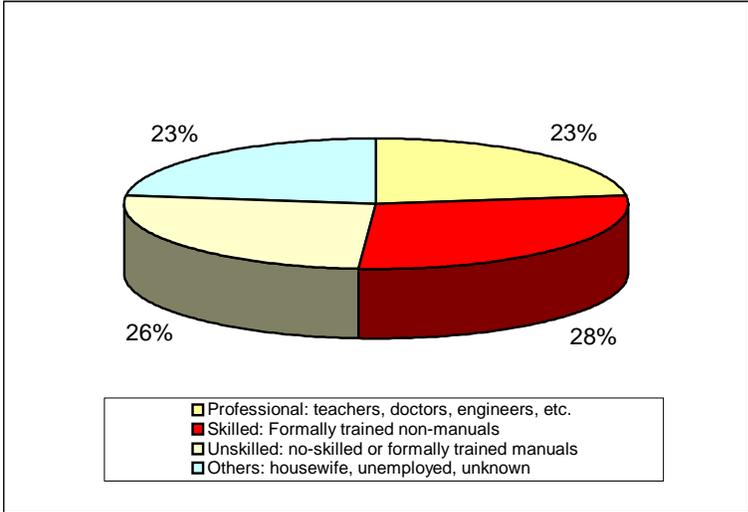

Figure 4. AIDS Mortality by Labour Group 1987-2003

4.2.3. Modes of transmission

The majority (85%) of the reported HIV infected persons are Seychellois. The modes of transmission of all HIV/AIDS reported cases (1987-2003) are presented in Figure 5. The most frequent was heterosexual (70%) followed by combined homo/bisexual (25%) and mother-to-child transmission (5%). Only one single case of intravenous drug use was confirmed.

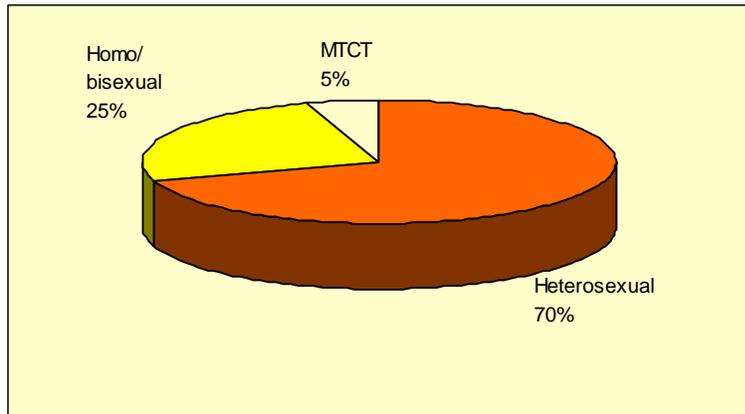

Figure 5. Modes of HIV transmission (1987-2003)

4.2.4. Sexually-transmitted infections

Worldwide studies have shown that the number of STI cases is an indicator of trends in HIV infection. Figure 6 shows the reported STIs (excluding HIV and AIDS) in CDCU since 1998. In 2001, there was a sharp increase in STIs compared to the previous year while in the two following years there was a decrease in the number of reported cases. However, this may not reflect the true magnitude of STIs in the country as patients are known to seek treatment in district health facilities and private practices, which may not necessarily be reported centrally. In 2001, 11% of the reported sexually infectious diseases were among adolescents aged 15-19 years old. By 2003, the figure had risen to 16%.

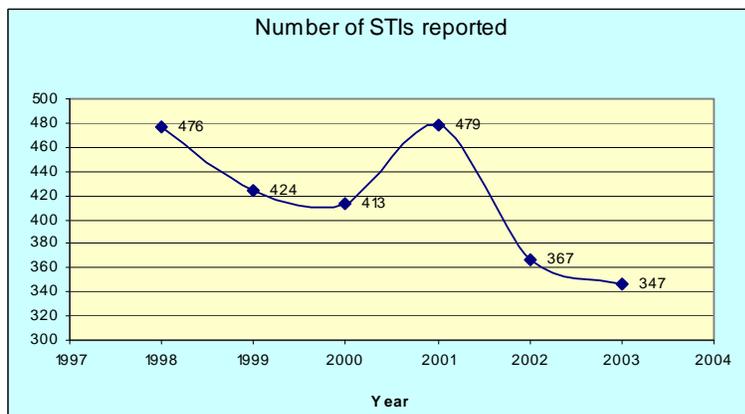

Figure 6. Reported Sexually Transmitted Infections in CDCU (1998-2003)

4.2.5. Pregnancies and abortions

From 1999 up to December 2003, a total of 2,394 abortions were recorded at the Victoria hospital where almost all abortion cases are admitted. Figure 7 presents the percentage of total recorded pregnancies that ended in abortions (elective, septic, induced and other type of abortions) per reported pregnancies from 1987 to 2003 in Seychelles. Out of 460 abortions reported in hospitals in 2002, approximately 81% were reported as unsafe. An average of 40 abortions per month has been reported in the past 5 years, almost 1.3 per day. The abortion rate in Seychelles for 2003 was estimated at 22 per 1,000 women aged 15-44 years old. From 2000 to 2003, 18% of abortions were among adolescents below 19 years. These data show that there is unprotected sex practised, which is a major risk for HIV infection.

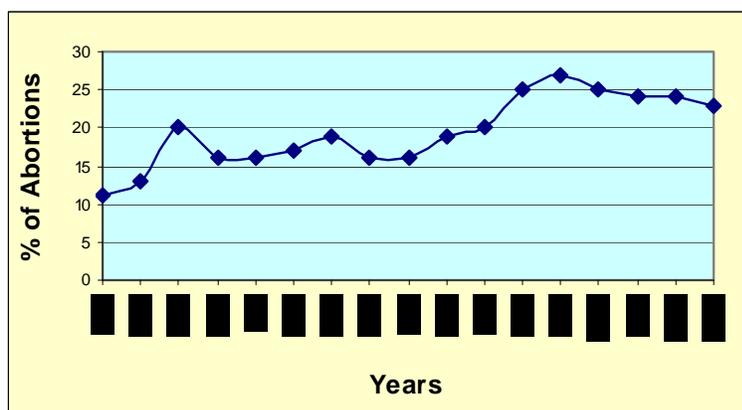

Figure 7. Percentage of reported abortions per reported pregnancies (1987-2003)

4.2.6. Knowledge, Attitudes and Practices related to HIV and AIDS among the Seychellois population

A study on knowledge, attitudes and practices (KAP) conducted in January-February 2003 was designed to evaluate the current level of knowledge, attitudes and practices among the Seychellois population from 15-65 years old. A questionnaire pre-tested, anonymous unlinked was administered.

Out of 2,000 persons randomly and proportionally selected based on the population distribution from Mahé, Praslin, La Digue and Silhouette from 26 health districts, 1,706 voluntarily participated.

Males and females were comparable in most of the socio-demographic indicators. The mean age of the respondents was 35.6. Ninety nine percent of the respondents had heard about HIV/AIDS. However, several misconceptions still exist concerning the HIV modes of transmission. Strong association was found between correct attitudes and the level of knowledge of the respondents.

Negative attitudes related to discrimination of people infected or affected with HIV and AIDS are still prevalent. Apart from respondents who were married or living with a regular partner, 81% had experienced sexual intercourse. The median age at first sexual intercourse was 17 years for males and 18 years for females. Males reported more frequently commercial sexual intercourse compared with females ($p=0.0000$). Genital discharge was reported in 2% of the cases and genital ulcers in 1%. Among those who reported having had sex with commercial sexual partners in the past month, 32% (18/56) did not use condoms, mainly due to the fact that they did not like it (45%). Only 2% (39/1692) of respondents did not know a place where condoms could be obtained. The most reported source of information related to male and female condoms was television (54%), radio (18%) and health centres (8%).

The results demonstrate that although the level of information on STI, HIV and AIDS is high, misconceptions still persist. Wrong attitudes and behaviours relating to the disease need to be analysed in a multi-sectoral context, to improve the health education strategies, particularly among youth.

4.3. Underlying causes of the HIV and AIDS epidemic in Seychelles

4.3.1. Major driving forces behind the epidemic

Although there has not been any formal studies on the major forces underpinning the dynamics of the epidemic in Seychelles, available data and the consensus arising from the national prioritisation and planning workshop held from 12th to 14th August 2003 suggest that the increasing trend of the epidemic in Seychelles may be rooted in economic, social and cultural factors. Among those, family instability and the weakness of the Personal and Social Education Programme (Ministry of Education and Youth) in implementing appropriate sexual and life skills education seem to be the most prominent. These factors are reinforced by widespread discrimination and stigmatisation against PLWHAs, poor perception of vulnerability associated to sexual taboos, early sexual intercourse, unprotected sex, limited accessibility and acceptability of condoms, increased trends of substance abuse particularly among youth.

4.3.2. Vulnerability factors

Vulnerability factors are summarized in the Problem Trees designed by workshop participants in the strategic planning formulation (Please see Annex).

The underlying socio-economic and cultural factors include

- material need and materialism;
- alcohol abuse and illicit drug use;
- high degree of migration;
- informal commercial sex work;
- gender inequality, especially in sexual behaviour;
- risky sexual practices;
- inadequacy of information, education and communication, including the media;
- knowledge not being translated into appropriate change in behaviour;
- denial;
- stigma and discrimination.

4.4. Current impact and potential threats of the epidemic in Seychelles

If the HIV/AIDS epidemic is allowed to continue to spread in Seychelles, the consequences are likely to be disastrous and will reverse the socioeconomic achievements attained so far. Current trends indicate the likely impact to be in the following areas:

- Increasing number of PLWHAs, especially in the 15-49 age groups, with related socioeconomic impact;
- Increasing number of babies born to HIV positive mothers;
- Additional burden on MOH resources eg expenditure on antiretroviral therapy and costs of support services replacing other programmes, as well as social services;
- Increased hospital bed occupancy rate;
- Increasing number of orphans;
- Associated stigmatization and discrimination.

5 THE RESPONSE ANALYSIS

5.1 Government response (health and other sectors) to the HIV and AIDS epidemic in Seychelles

a) Policy, programme and funding

The Seychelles effort to combat HIV/AIDS began in 1987 on discovery of the first HIV case. The Ministry of Health, in particular, has developed some strategies to prevent and control HIV/AIDS and other sexually transmitted infections since the late eighties. These have been

- A Short-Term Plan (1987-1988);
- A Medium-Term Plan (1989-1993);
- A Long-Term Plan (1993 and beyond);
- A Strategic Plan for HIV/AIDS/STIs in 2001.

An AIDS-IEC Committee was formed in 1988 within the Ministry of Health and supported by the Technical Advisory Committee for HIV/AIDS/STIs a year later. Following a workshop on AIDS counselling in 1991, the first non-governmental organization to deal with HIV/AIDS, the HIV/AIDS Support Organisation (HASO) was born and later registered in 1995. An expanded UN Theme Group for HIV/AIDS was created in 1996 by the resident WHO Liaison Officer.

The goals of these committees were to

- prevent HIV transmission;
- reduce the personal and social impact of HIV infection;
- mobilise and unify international and local resources.

The real difference, however, came with the “Break the Silence” Campaign initiated by the Durban World AIDS Conference in 2000. A national policy was developed and publicized at a country level and a multisectoral approach and community mobilization promoted.

Despite numerous activities taking place at all levels, there is a need for coordination among the different stakeholders as well as within the different sectors. A directory mapping out all interventions, funded by UNDP, has been created to facilitate harmonisation. (Please see Annex 3). In February 2004, a network of NGOs including PLWA associations, the Seychelles HIV/AIDS Links Association (SHALA) was officially launched under the blessing of the East African National Network of AIDS Service Organisations (EANNASO).

There is increased evidence of community action with activities taking place at district level organised by different stakeholders in the areas. One example is World AIDS Day where a number of events are organised by the district administration together with the local health centre and schools. However, there is a need to develop district plans and to ascertain access of funds to the communities.

The response so far in terms of policy, programme and resources by government, civil society, bilateral, and multilateral agencies is illustrated in the table below.

Figure 8. shows the main national and international agencies involved in national responses to HIV/AIDS, and their main programmes

Figure 8. Main national and international agencies involved in national responses to HIV and AIDS, and their main programmes

Name of Agency	Main programmes	Budget 2003-4 (US\$)
Government		At least 308,000
1. Ministry of Health (MOH)	Comprehensive Prevention and Care Clinical Care / Counselling Laboratory Support Programmes development Nutritional advice Promoting safe sexual behaviour Condom distribution STI Management / Control Blood Safety Policy initiation and review IEC Community Services	200,000
2. Ministry of Social Affairs and Employment (MSAE)	Care/Support Mitigation of impact Contribution to workplace policy	88,000
3. Ministry of Education and Youth (MOEY)	Comprehensive Prevention programmes in school and out of school youth	20,000
4. Ministry of Local Government and Sports (MLGS)	Community Activities /IEC	Not specified
5. Ministry of Defence	Resource Mobilisation / IEC	Not specified
6. Ministry of Transport and Tourism	Workplace IEC	Not specified
7. Ministry of Environment	Workplace IEC	Not specified
8. Ministry of Agriculture	Workplace IEC	Not specified
9. Ministry of Foreign Affairs	Resource Mobilisation Regional / International Networking	Not specified
Private Sector		57,000

1. Seychelles Breweries	IEC, Resource Mobilization Policy	10,000
2. Federation of Employers	Development; IEC	3,000
3. Cable and Wireless	IEC, Resource Mobilization	20,000
4. Barclays Bank	Resource Mobilization	20,000
5. Berjaya Hotels	Resource Mobilization	2,000
6. Deepam's Cinema	IEC	2,000
Parastatals		12,000
1. Seychelles Broadcasting Corporation	IEC	
2. Air Seychelles	Care/Support/ Prevention	
Seychelles Marketing Board (SMB)	Drug Procurement	
Non-Governmental Organizations	Prevention, Care & Support	75,000
1. HIV/AIDS Support Organization (HASO)	Mitigation of impact Condom Distribution	
2. Faith and Hope Association (FAHA)	Promoting safer sexual behaviour; Care & Support; Mitigation of impact	
3. Alliance of Solidarity For the Family	Care & Support; Mitigation of impact	
4. Help for Bella Campaign	Care & Support; Mitigation of impact	
5. National Council for Children (NCC)	IEC / Promoting safer sexual behaviour in children	
6. Soroptimists	IEC Youth	
7. Farmers' Association	IEC	
8. Rajiv Gandhi Foundation	IEC / Fund Raising	
9. Red Cross	Condom Distribution / IEC	
10. The Rotary	IEC	
11. Nurses' Association of Seychelles	IEC / Sensitization	
12. Seychelles Medical and Dental Association	IEC	
13. Drug and Alcohol Council	Drug/Alcohol Surveillance and Control	
14. Ex-UK Students Association	IEC	

Faith-Based Organizations	IEC, Care and Counseling	Not specified
1. Roman Catholic Church 2. Anglican Diocese 3. Seychelles Evangelical Alliance (SEA) 4. Seventh day Adventist Church 5. Jehovah's Witnesses 6. Christian Community Fellowship 7. Apostolic Church 8. FEBA Radio 9. Muslim Community 10. Hindu Community 11. Others		
Bilateral	IEC/Care & Support	400,000
French Cooperation	Care & Support; Capacity Building IEC,	350,000
Indian High Commission	Care & Support	50,000
Multilateral		At least 220,000
UN Agencies

<input type="checkbox"/> ILO	Policy Development; IEC	9,000
SADC	Capacity Building	Not available
Commonwealth ECSA	Capacity Building Policy Development	Not available

5.2 Structures in place for coordination

It is well known that in countries that have had significant successes in slowing down or reversing the trends in HIV infection, the key elements contributing to the successes have been consistent interest and commitment at the highest levels of leadership, and persistent action by all groups in society, including people living with HIV/AIDS. The following committees are presently in place. Membership of some of these bodies is found in Annex 2.

5.2.1 The National AIDS Council (NAC) was launched on 24th May 2002 and has met on several occasions since. It has been appointed the Country Coordinating Mechanism (CCM) for the Global Fund Proposal. Other important items on the agenda have been: Legislation and regulations; Working Groups by the different sectors; Counseling needs; National AIDS Trust Fund; Antiretroviral therapy; Specific individual needs of PLWHAs; Stigma and Discrimination. The NAC reports to the Cabinet through the Minister for Health.

5.2.2 The National AIDS Trust Fund was created for massive mobilisation of resources for prevention through education, information and communication, control through well established public health measures and caring through clinical services and support for those infected and affected. Since its launching on 11th October 2002, the Fund has raised over SR 200 000. Its terms of reference are:

1. To create national interest and commitment for the prevention and control of HIV and AIDS and the care of those infected and affected;
2. To mobilise resources for HIV/AIDS programmes;
3. To promote and support national programmes on HIV/AIDS

5.2.3 The Technical Advisory Committee for HIV/AIDS in the Ministry of Health meets fortnightly to discuss issues pertaining to care and support, testing, treatment, surveillance and other guidelines. Main issues are research and surveillance; care and counselling; Blood Safety; Provision and Difficulties with antiretroviral therapy; Resource mobilisation; STI management; community activities; IEC; laboratory; and others eg Contact Tracing; Confidentiality.

5.2.4 The AIDS-IEC is a multisectoral sub-committee of the TAC, launched in 1988 with a mandate to develop a national strategy for dissemination of HIV/AIDS information and an integrated approach to IEC within the Ministry of Health and other sectors.

5.2.5 The AIDS Prevention and Control Programme (also referred to as AIDS Programme) is a unit with full-time AIDS Programme Manager and secretary under the Division of Health Education and Promotion in the Ministry of Health. It is heavily reliant on the Health Promotion Section, with a full-time AIDS-IEC Coordinator. It is responsible for advocacy and prevention aspects of HIV/AIDS, reaching a wider community. However, it is much involved in planning, facilitation, coordination, implementation, monitoring and evaluation of activities. The section has received assistance from WHO, UNAIDS and UNDP officials. The AIDS Programme also holds the NAC Secretariat.

5.2.6 The Expanded UN Theme Group was launched in 1996 and meets every two months. The UN Theme Group has managed to survive a few setbacks. Together with the TAC, the UN Theme Group has been the task force in planning national activities eg Global Fund Proposal and World AIDS Day activities. It is chaired by WHO and co-chaired by the Ministry of Health. The main objectives of the UN Theme Group are advocacy and resource mobilisation. The UN Theme group does not have a budget. Activities are implemented by MOH and other agencies.

5.2.7 The Faith-Based Organisations (FBOs) meet at least quarterly with the AIDS Programme to discuss activities and share experiences. All FBOs are invited to attend.

5.2.8 The Social Services Committee comprises of representatives from Ministry of Social Affairs and Employment, Social Security Scheme, CDCU, AIDS Programme, Medical Social Worker, Representatives of Medical Ward and North East Point Hospital, HASO and FAHA. It discusses and sorts out problems related to social services, for example, financial benefits, home care and employment issues.

5.2.9 Focal persons are in contact for dialogue between organizations and the AIDS Programme and can be co-opted on any committee as necessary.

5.2.10 The Seychelles HIV/AIDS Links Association, launched in February 2004, is a network of eleven NGOs involved in the HIV/AIDS response. It is affiliated to the East African National Network of AIDS Service Organisations.

6 MAIN ACHIEVEMENTS AND CHALLENGES

A review of the national response for HIV/AIDS/STIs was conducted in April 2003 in line with the UNGASS report. This document, together with contributions from participants at the strategic planning workshop, indicated the following achievements and challenges in the Seychelles' response to the epidemic:

6.1. Achievements

- High level of awareness and knowledge of HIV/AIDS among the population;
- Noticeable improvement in the political climate and commitment to HIV/AIDS prevention and control;
- National Policy on HIV/AIDS/STIs;
- Strengthened multisectoral approach;
- Involvement of religious bodies in sensitisation programmes;
- Ongoing surveillance in CDCU;
- Safe blood transfusion: No documented case of HIV acquired through transfusion;
- Improved access to voluntary counselling and testing to include pregnant women, STI and TB patients;
- Strengthening of programme for prevention of mother-to-child transmission;
- Introduction and sustenance of programme for post-exposure prophylaxis;
- Increase in condom promotion and distribution in recent years;
- Improved management of STIs and adoption of the syndromic approach in district health centres;
- Better management of opportunistic diseases;
- Introduction of antiretroviral therapy;
- HIV testing of immigrants;
- Addressing of early sex issue: (PSE curriculum, Parenting education manual, NCC living values, Capacity Building, "Sex not yet" Campaign, Involvement of FBOs);
- Enforcement of existing laws and policies: (Family Tribunal, Child Protection Act, Substance Abuse Workplan 2002-2006, ILO Code of Practice, Revised Public Health Act);
- Regional networking of partners (eg NGO training through Indian Ocean Initiative).

6.2. Gaps/Challenges

- Need for further translation of political commitment to action in HIV/AIDS control efforts;
- Persistent risky behaviour such as sexual relationship with multiple partners and unprotected sex despite a reportedly high level of awareness of HIV/AIDS;

- Alcohol and drug abuse;
- Inadequacy and poor coordination of youth prevention programmes and insufficiency of youth friendly facilities;
- Limited IEC materials targeted at youth and other vulnerable groups;
- Inadequacy of media involvement;
- Insufficient research, dissemination and use of research results for decision making;
- Secrecy, lack of openness and denial of the HIV/AIDS problem in Seychelles;
- Persistent widespread stigma and discrimination surrounding HIV/AIDS;
- Lack of organised and consistent HIV/AIDS/STI surveillance activities;
- Inadequate monitoring and evaluation of intervention activities;
- Inadequate and ineffective involvement and coordination of all sectors including other ministries, civil society and private sector;
- Limited human and financial resources at all levels;
- Frequent staff movement and turnover;
- Inadequacy of continuum of care between hospital and community;
- Insufficient condom outlets;
- Lack of guidelines and operational plans at district administration level;
- No protocol for certain aspects of care and counselling;
- Inadequate teaching and training programmes: curricula, training manuals, methodology, capacity;
- Judgmental attitudes of certain religious youth services;
- Poor harmonisation of existing laws,: (legal age for marriage and sex is as from 15 yrs but age for access to condom 18 yrs ; Sexual abuse-law exists but need for guidelines to facilitate processes) ;
- Need for certain legal issues to be revisited, amended and integrated into the mandate of various institutions (Employment Act, human rights of PLWHAs);
- Need for improvement in accessibility to different legal documents for legal backup on issues regarding HIV/AIDS;
- NAC composition to be revisited and chairmanship acceded to by highest authority in the country;
- Implementation and commitment to national strategies (eg National IEC Strategy; Substance Abuse work-plan 2002-2006 to be better advertised).

7 GUIDING PRINCIPLES

The following principles for HIV/AIDS and STI prevention, treatment and care efforts for Seychelles are derived from the National AIDS Policy, Seychelles, 2000

7.1 The Government has a crucial responsibility with regard to the provision of education, care and welfare of all people of Seychelles;

7.2 Both government, civil society, private sector, assisted by bilateral and multi-lateral partners shall be involved in the fight against HIV/AIDS in a multisectoral approach;

7.3 The vulnerable position of women, youth and children in society shall be addressed to ensure that they do not suffer discrimination, nor remain unable to take effective measures to prevent infection;

7.4 Education, counselling and health care shall be clear, accurate, and sensitive to the culture, gender, language and social circumstances of all people at all times;

- 7.5 Mass media should be utilised in a positive manner to create and promote awareness on HIV/AIDS in the population with appropriate change of behaviour;
- 7.6 Stable relationships and positive family and cultural values will be encouraged;
- 7.7 STI prevention and control are central elements in the response to HIV/AIDS;
- 7.8 Confidentiality and informed consent with regard to HIV testing and test results shall be protected with shared confidentiality and disclosure in specifically defined, supported by pre and post test counselling;
- 7.9 People with HIV and AIDS, their partners, families and friends shall not suffer from any form of discrimination and stigmatisation, and their human rights and dignity respected and shall be involved in all prevention, intervention and care strategies;
- 7.10 Capacity building will be emphasised to accelerate HIV/AIDS prevention and control measures;
- 7.11 Surveillance and research shall focus on priority needs in Seychelles as well as in monitoring and evaluation public health interventions.

8 JUSTIFICATION FOR THE STRATEGIC PLAN

Guided by the outcomes of the situation and response analyses the following goal is set:
“To reverse the trends of HIV infection amongst the young people (15 –34 years) and to reduce the suffering among the infected and affected”.

The strategic objectives are as follows:

1. To create and sustain an environment conducive to a more coordinated and efficient multisectoral response to HIV/AIDS;
2. To reduce the risk factors to HIV/AIDS among the young people;
3. To reduce the vulnerability of the young people to HIV/AIDS;
4. To reduce the impact (psychological, medical, social, economic and emotional) of HIV infection and AIDS.

Strategic objective 1: To create and sustain an environment conducive to a more coordinated and efficient multisectoral response to HIV and AIDS.

Justification:

The national response to HIV/AIDS is a developmental challenge as the impact of the epidemic affects all strata of society. Considerable effort and resources have been used by the public sector and benevolent organisations, with recognisable achievements. However, there still exist pockets of the society that have been inadequately targeted for intervention. In order to generate a proper

climate for all stakeholders, with maximal use of resources, a broad-based partnership approach with the engagement of all sectors is essential.

Strategic objective 2: To reduce the risk factors to HIV/AIDS among the young people.

Justification:

Analysis of the trends of HIV infection in Seychelles reveals that the prevalence rate amongst the youth (15-24 years) is 0.15% compared to 0.1% in the general population (Statistics, Communicable Diseases Control Unit 2003). This clearly demonstrates the vulnerability of young people. In their physical and emotional transition to adulthood, through curiosity, adventure, peer pressure, and imitation, the youth is exposed to HIV infection. Of all reported cases of abortions at Victoria Hospital from 2000 to 2003, 38% were 15-24 years and 80% were 15-34 years old. In 2003, first live births were recorded at 15% in the age group less than 20 years and 16.2% of all births were to teenagers (15-19 years).

Two practices which are officially illegal but yet are of particular concern because of increased visibility and vulnerability are homosexuality and commercial sex work. In 2003, 25% of new HIV reported cases were amongst MSMs (homo/bisexual). Denial of the activity of CSWs increases their risk of HIV infection and its spread. Other emerging risky practices amongst the young people are substance abuse, including injectable drug use.

In view of the above, priority will be given to planning interventions that will reduce the factors that place young people at risk of HIV infection. Special emphasis will be placed on groups that have been marginalised.

Strategic objective 3: To reduce the vulnerability of young people to HIV/AIDS

Justification:

Sexual activity at an early age makes the youth more vulnerable to HIV infection. Youth studies conducted in Seychelles have shown that the youth as early as 10 years are engaged in sexual activities (Seychelles Youth Study 2001; ASFF 2002). In 2003, 15.5% of all known pregnancies were in teenagers 15-19 years old. These situations evoke great concern.

This strategic objective aims at reducing these factors that may particularly expose the youth. These are associated with culture, family stability, life skills, substance abuse, mobility of people and youth's use of time.

Strategic objective 4: To reduce the impact (psychological, medical, social, economic and emotional) of HIV infection and AIDS.

Justification:

The devastating effects of HIV infection are physical, psychological, medical, social, and economic, and impact on the individual, family, community and country as a whole. The magnitude of the effects of stigma and fear associated with the infection permeates right through the strata of society. This makes interventions difficult.

The objective of the strategy is to alleviate the impact of the epidemic. Special attention will be given to vulnerable groups such as orphans and children, and health care workers. Consideration will also be given to work places, quality care and support services, and blood transfusion services.

STRATEGIC FRAMEWORK

9 STRATEGIC FRAMEWORK

Goal: To reverse the trends of HIV infection amongst the young people (15 –34 years) and to reduce the suffering among the infected and affected

Strategic Objective 1: To create and sustain an environment conducive to a more coordinated and efficient multisectoral response to HIV and AIDS

Specific Objectives	Targets	Indicators	Means of Verification	Risks/Assumptions
1. To raise and sustain HIV/AIDS awareness among the whole population on the epidemic and its impact	1.1 Media Programmes on HIV/AIDS for the whole population are developed and implemented	Number/type of media programmes produced, aired and printed	KAPB 2007	Strong commitment by all stakeholders
	1.2 Journalists are trained in developing effective programmes in HIV/AIDS	Number of journalists trained in developing effective HIV/AIDS programmes	Annual Surveys	Effective media involvement
	1.3 Educational activities are organised & implemented by all CBOs, FBOs, NGOs and interest groups	Average number of interventions done per year targeting the population and specific groups: teachers/pupils; workers; youth	Reports	Additional programme accepted by educators
	1.4 Personal and Social Education (PSE) is fully implemented in all educational institutions	% teachers who taught PSE in the last week	Desk review	HIV/AIDS and STI education recognized as useful by personnel
	1.5 All teachers teaching PSE are trained	Number of PSE lessons / class delivered in the last week		Adequate resources
	1.6 All personnel in educational institutions are sensitized	Number of PSE teachers trained		
	1.7 Workplace policy is developed and implemented in all sectors	% personnel in educational institutions sensitized Workplace policy developed		

	1.8 HIV/AIDS is integrated in all peer education programmes including those in workplaces	% workplaces with policy and programmes in place %peer education programmes with HIV/AIDS integrated		
2. To develop, implement and reinforce legal framework related to HIV/AIDS	2.1 The community is informed and sensitised on the relevance of a legal framework 2.2 All top level managers in media organizations are advocated to and sensitized on pertinent issues related to HIV/AIDS 2.3 All politicians and law makers are advocated on pertinent issues related to HIV/AIDS 2.4 Review, amendment and harmonisation of existing legislation and policies are carried out. 2.5 Laws and regulations that protect PLWHAs and groups vulnerable to HIV/AIDS are created. 2.6 The youth, communities and PLWHAs are involved at all levels of decision-making.	% district communities informed on the relevance of a legal framework Number of top level media managers sensitised on pertinent issues related to HIV/AIDS % politicians and law makers sensitized Number of policies/laws reviewed, amended and harmonized Number of new laws and regulations in place to protect PLWHAs and groups vulnerable to HIV/AIDS % group representation from community at decision making fora	Desk review Surveys Reports Minutes of meetings	Laws, policies and regulations implemented Regulations are up-to-date and amendments timely Effective media involvement Strong commitment by media managers
3. To promote multisectoral mobilisation and coordination	5.2 Appropriate institutional arrangements and coordination mechanisms are set up	Number of institutions/ organizations with focal points Number of institutions/	Memorandum of understanding formulated and	Commitment and equitable involvement of all sectors

	<p>5.3 All the sectors in Seychelles have mainstreamed HIV/AIDS in their activities</p> <p>5.4 All relevant stakeholders are involved at all levels of decision-making</p> <p>5.5 The media is involved in the reporting of HIV/AIDS related issues</p>	<p>organizations belonging to a network</p> <p>Number of networking bodies established and functional</p> <p>Number and type of organizations/stakeholders involved by activity</p> <p>Number and % of sectors with HIV/AIDS work-plans and budgets</p> <p>Number of press releases sent to SBC</p> <p>Number of reports on HIV/AIDS in the media in last six months</p>	<p>approved</p> <p>Regular reports</p> <p>Minutes of meetings</p>	
<p>4. To reinforce the co-operation network at the national, regional and international levels</p>	<p>4.1 All activities and resources at national, regional and international partnership are identified</p> <p>4.2 NAC is reviewed and chaired by highest level of leadership</p> <p>4.3 A partnership forum of resident bilateral and multilateral donor agencies is created</p> <p>4.4 Representatives of Seychelles' institutions actively participate in national, regional and international initiatives</p>	<p>Mapping exercise conducted</p> <p>Evidence of a functional national body that promotes partnership among government, private sector and civil society</p> <p>Evidence of partnership forum of donor agencies</p> <p>Number of meetings of different sectors at national level</p> <p>Evidence of active participation in regional and international for a</p>	<p>Survey</p> <p>Minutes of meetings</p> <p>Reports</p>	<p>Commitment and equitable involvement of all sectors</p>

5. To encourage greater involvement of the community including PLWHAs	5.1 The community including PLWHAs is involved in all HIV/AIDS interventions	Evidence of community/PLWHA representation in all interventions	Reports	Community and PLWHAs are committed to participate in activities at all levels
---	--	---	---------	---

Strategic Objective 2: To reduce the risk factors to HIV/AIDS among young people

Specific Objectives	Targets	Indicators	Means of Verification	Risks/Assumptions
1. To increase the proportion of young people using condoms in all risky sexual encounters	<p>1.1 National policy and guidelines on condoms are established</p> <p>1.2 Condom manager and focal point for coordination are established</p> <p>1.3 All relevant partners and resources in condom marketing and distribution are mobilized</p> <p>1.4 Materials and resources to create educational awareness of using condoms and practising safer sex are developed, disseminated and utilised</p> <p>1.5 All out-of-school youth have access to information and services on HIV/AIDS/STIs to practise safer sexual behaviour</p>	<p>Evidence of national policy and guidelines on condoms</p> <p>Evidence of condom manager and focal point in place</p> <p>Number and type of partners involved in condom marketing and distribution</p> <p>% young people aged 15-24 years who both correctly identified ways of preventing the sexual transmission of HIV and who rejected major misconceptions about HIV transmission</p> <p>% young people aged 15-24 years reporting the use of a condom during sexual intercourse with non-regular sexual partner</p>	<p>KAPB Study</p> <p>Surveys</p> <p>Reports</p>	<p>Same methods are utilized</p> <p>Support from all stakeholders</p> <p>Accessibility to out-of-school youth</p> <p>Regular stocks and supplies</p>

	<p>1.6 Condom distributors are trained</p> <p>1.7 The number of outlets for condom distribution is increased</p> <p>1.8 The number of condoms distributed is increased</p> <p>1.9 Social marketing programmes of condoms are developed and implemented</p> <p>1.10 The female condom is promoted</p> <p>1.11 Condoms are available at all times</p>	<p>Number of distributors trained</p> <p>Number of condom outlets with condoms in stock</p> <p>Number of condoms distributed at outlets and nationwide</p> <p>Number of social marketing programmes in place</p> <p>Median age at first sex</p> <p>Condom use at first sex</p> <p>Condom use at last sex</p>		
2. Develop youth friendly health services	<p>2.1 Guidelines for the youth friendly health package are defined and developed</p> <p>2.2 Training on youth friendly approach is organised and conducted for personnel working with youth</p> <p>2.3 Youth friendly health services are decentralised to regional level</p> <p>2.4 Youth friendly services are integrated in the activities of all the health centres</p> <p>2.5 HIV/AIDS youth friendly services are formally integrated into the activities of youth bureaus</p> <p>2.6 HIV/AIDS youth friendly services</p>	<p>Evidence of guidelines for youth friendly health package</p> <p>Number of youth workers trained in youth friendly approaches</p> <p>% health centres with youth friendly services</p> <p>% youth attending health services as per site and location</p> <p>% youth bureaus with HIV/AIDS activities</p> <p>Number of HIV/AIDS youth activities at district level</p> <p>% FBOs with youth-friendly</p>	<p>Surveys</p> <p>Reports/ Records</p> <p>Desk Review</p>	<p>Acceptance by all stakeholders including youth, religious groups, health workers, communities and parents</p> <p>Policy changes</p>

	are integrated into the activities of faith-based organisations	HIV/AIDS activities		
	2.7 Best practices and models of youth friendly services will be identified and shared with all stakeholders	Number of best practices shared		
3. To reduce the rate and impact of sexual abuse amongst young people	<p>3.1 Public awareness programmes on the issue of rape/sexual abuse as contributing to the HIV/AIDS epidemic are strengthened and implemented</p> <p>3.2 Policies and guidelines for post-exposure prophylaxis (PEP) programmes are developed and implemented for all cases of rape/sexual abuse</p> <p>3.3 All victims of sexual abuse have access to PEP</p> <p>3.4 Institutions are sensitised to the procedures regarding the implementation of the PEP Programme.</p> <p>3.5 Revised policies / legislation related to abuse and its punishments are approved and disseminated to interest groups for implementation</p> <p>3.6 Teachers, health workers, NGOs, FBOs, policemen, parents, young people and children are trained yearly on preventing, identifying and dealing with cases of abuse</p> <p>3.7 All known, probable and potential abusers receive counseling</p>	<p>% sexual abuse among youth reported by institution</p> <p>Number of programmes developed and implemented addressing rape/sexual abuse in youth</p> <p>Policy on Post Exposure prophylaxis for victims of sexual abuse developed and implemented</p> <p>% victims of sexual abuse who had PEP</p> <p>Number of institutions sensitized on the PEP programme implementation</p> <p>Evidence of laws/policies regarding sexual abuse in place and implemented by interest groups</p> <p>Numbers of persons trained in management of sexual abuse by specific group</p> <p>Number of known, probable and potential abusers who received counseling</p>	<p>Reports</p> <p>Desk reviews</p> <p>Surveys</p>	<p>Support from all stakeholders</p> <p>Legal and policy reviews have taken place</p> <p>Cases of sexual abuse are reported</p>

	3.8 All condemned abusers have access to rehabilitative services	Number of condemned abusers who accessed rehabilitative services		
4. To reduce the incidence of HIV/AIDS/STIs among the MSM, CSW, drug users and prison inmates	<p>4.1 Comprehensive interventions targeting CSW, MSM, drug users and prison inmates are developed and implemented with involvement of NGO's</p> <p>4.2 Personnel working with CSW, MSM, drug users and prison inmates is sensitized and trained on management of specific groups' behaviour and sexual practices</p> <p>4.3 All MSM, CSW, drug users and prison inmates are made aware of the risks associated with their behaviour and sexual practices and take preventive measures</p> <p>4.4 CSW, MSM, drug users and prison inmates have access to HIV/AIDS related services</p>	<p>Number of organizations which have integrated interventions targeting MSM, CSW, drug users and prison inmates in their programmes</p> <p>% personnel trained on management of specific groups' behaviour and sexual practices</p> <p>Condom use at last sexual intercourse by partner type (regular/non-regular; commercial)</p> <p>Number of CSW, MSM, drug users and prison inmates accessing HIV/AIDS services</p>	<p>Reports from organisations</p> <p>Behavioural Surveillance Survey</p>	<p>Commitment of all sectors and institutions</p> <p>Data available on groups targeted</p> <p>Access to and involvement of groups being targeted</p> <p>Reduced resistance from groups and communities</p> <p>User-friendly services</p> <p>Regular supply of condoms</p>
5. To reduce the rate of new STIs among young people	<p>5.1 Rate of STIs in young people is established and monitored</p> <p>5.2 IEC materials to promote effective use of STI services are developed and disseminated</p> <p>5.3 All youth are sensitized on the dangers of STIs as risk factors for HIV/AIDS, symptoms and necessity of</p>	<p>Evidence of regular survey and surveillance system in place</p> <p>% youth in/out of school reached and sensitized on risk factors, symptoms and need for appropriate management of STIs</p> <p>Evidence of reviewed national guidelines on STI management at</p>	<p>KAPB Surveys</p> <p>Health facility records and reports</p>	<p>National guidelines reviewed on management of STIs</p> <p>Youth-friendly facilities</p>

	<p>appropriate management of STIs</p> <p>5.4 National guidelines on STI management are reviewed and disseminated to all health facilities</p> <p>5.5 All health care personnel are trained in the management of STIs and in developing youth friendly attitudes</p> <p>5.6 All youth with STI symptoms seek care in a health facility in an early stage</p> <p>5.7 All health facilities provide diagnosis, counseling, treatment, follow-up and contact tracing services for STIs</p> <p>5.8 All STI patients have access to quality drugs and management.</p>	<p>health facilities</p> <p>Evidence of IEC materials in youth facilities</p> <p>% youth seeking care for an STI at a health facility</p> <p>Number of health workers trained in STI management</p> <p>% health facilities which provide diagnosis, counseling and treatment services for STIs</p> <p>% health facilities with quality STI drugs in stock</p> <p>% patients with STIs at selected health facilities who were appropriately diagnosed, treated and counseled according to national guidelines</p>		
--	---	--	--	--

Strategic Objective 3: To reduce the vulnerability of the young people to HIV/AIDS

Specific Objectives	Targets	Indicators	Means of Verification	Risks/Assumptions
1. To increase the life skills of youth regarding sexual issues.	<p>1.1 Existing PSE curriculum is reviewed with special emphasis on life skills, including abstinence, negotiation and parenting</p> <p>1.2 Gender is mainstreamed in PSE</p> <p>1.3 Improved and effective PSE teaching methods are introduced and implemented</p> <p>1.4 PSE curriculum includes formal assessment of teaching and learning by all stakeholders</p> <p>1.5 All PSE teachers are trained in life skills education</p> <p>1.6 All schools have teachers trained in life skills education</p> <p>1.7 Existing community-based interventions targeting youth, e.g. FBOs have integrated life skills including abstinence, negotiation and parenting in their programmes</p> <p>1.8 The role of PTAs is reviewed and HIV/AIDS is integrated to include life skills e.g. abstinence, negotiation and parenting in their programmes</p>	<p>Evidence of PSE curriculum review with appropriate topics /subjects</p> <p>% teachers who are trained in life skills education who taught it during the last academic year</p> <p>% schools with teachers who are trained in life skills education who taught it during the last academic year</p> <p>Median age at first sex</p> <p>Condom use at first sex</p> <p>Condom use in last sex</p> <p>% young people 15-24 years who are HIV-infected</p> <p>% Existing community-based activities targeting youth, including PTA's, which include life skills</p> <p>% PTAs with HIV/AIDS activities integrated</p>	<p>KAPB</p> <p>Reports</p> <p>Surveys</p>	<p>Acceptance of additional programme in schools</p> <p>Accessibility to out-of-school youth</p> <p>Support of stakeholders especially community based organisations</p>

	<p>1.9 Workplace interventions targeting youth have integrated HIV/AIDS education and life skills including abstinence, negotiation and parenting in their programmes</p> <p>1.10 The nature of the existing recreational facilities is diversified and de-politicised, and their quality improved.</p>	<p>% Workplace educational activities targeting youth which include life skills</p> <p>% recreational activities which include educational component in life skills</p>		
<p>2. To reduce the number of young people affected by the effects of dysfunctional families</p>	<p>2.1 The situation of young people affected by dysfunctional families is assessed</p> <p>2.2 The whole population is sensitised on the negative effects of dysfunctional families in relation to HIV/AIDS</p> <p>2.3 Programmes for family support and parenting education, including HIV/AIDS/STIs, are developed, coordinated and implemented</p> <p>2.4 Mutual fidelity in couples is promoted</p> <p>2.5 Appropriate social services for HIV/AIDS prevention and support among dysfunctional families are introduced</p> <p>2.6 Pre-marital courses (e.g. CPM) include sensitisation on family instability and HIV/AIDS</p>	<p>% youth affected by dysfunctional families</p> <p>Number of campaigns conducted</p> <p>Knowledge on HIV/AIDS of members of dysfunctional family</p> <p>Number of marriages</p> <p>Number of divorces</p> <p>Number of families reached by parenting /family programmes</p> <p>Number of districts and sites with social services</p> <p>HIV/AIDS topics taught in premarital courses in last year</p>	<p>Community-based Survey</p> <p>KAPB Study</p> <p>Reports</p>	<p>Commitment from all stakeholders</p> <p>Social workers sensitized on HIV/AIDS</p> <p>Collaboration of partners</p> <p>Programmes are sustained</p> <p>Services are timely</p>

<p>3. To reduce the demand and supply of licit and illicit substances amongst young people</p>	<p>3.1 Laws and policies regarding alcohol consumption in local outlets and mass activities are reviewed and amended</p> <p>3.2 HIV/AIDS is integrated in the pre- and in-service training of all police and law enforcement professionals, with emphasis on the link between HIV/AIDS and alcohol abuse and illicit drugs</p> <p>3.3 Peer education interventions focusing on drug and alcohol consumption by both males and females are reviewed, strengthened, standardized and monitored</p> <p>3.4 Interventions which encourage abstinence from, and deferring age of first consumption of, alcohol are strengthened, developed and implemented</p> <p>3.5 Community-based interventions in educating young people on alcohol and drugs by NGOs and FBOs are strengthened</p> <p>3.6 Networking and collaboration among peer educational programmes are promoted</p> <p>3.7 All of victims of alcohol and drug abuse are referred for rehabilitation</p>	<p>Evidence of laws and policies reviewed and amended</p> <p>Number of police and legal officers trained on HIV/AIDS</p> <p>Number of programmes focusing on peer education and HIV/AIDS</p> <p>Evidence of integration of HIV/AIDS in alcohol and substance abuse projects</p> <p>Median age at first consumption of alcohol or drugs</p> <p>Community based NGO and FBO which included education of young people on alcohol/ drugs in last year</p> <p>Evidence of collaboration by different organizations conducting peer programmes</p> <p>Number of substance abuse victims referred to Rehabilitation Centre</p>	<p>KAPB Study</p> <p>Reports from DAC</p>	<p>Collaboration of all partners</p> <p>Law enforcement officers sensitized to HIV/AIDS and their link with substance abuse</p>
--	--	---	---	---

		Evidence of association between sexual activity and alcohol or drugs		
4. To reduce HIV/AIDS amongst mobile populations and migrant workers	<p>4.1 Research on the links between migration and HIV/AIDS is conducted</p> <p>4.2 The legal framework for mobile people, migrant workers and their families is reviewed</p> <p>4.3 Pre-departure, in-flight, post-arrival and reintegration programmes are developed and implemented for mobile populations (sailors, fishermen, travellers) and migrant workers</p> <p>4.4 HIV/AIDS is integrated in activities of mobile persons/migrant workers and their associations</p> <p>4.5 Employers of mobile or migrant workers are sensitized on HIV/AIDS</p> <p>4.6 Prevention efforts are focused on areas frequented by mobile groups and migrant workers</p> <p>4.7 Peer education and counseling are established for mobile groups and migrant workers e.g. fishermen</p> <p>4.8 Regional initiatives targeting HIV prevention in mobile populations are encouraged</p>	<p>Survey conducted and disseminated</p> <p>Evidence of review of legal framework</p> <p>Number of migrants reached with prevention services in last month</p> <p>Number of activities by/for mobile persons /migrant workers with HIV/AIDS input</p> <p>Number of condom retail outlets at frequented sites</p> <p>Number of condoms distributed at frequented sites</p> <p>Number/type of IEC materials targeting migrants</p> <p>Number of educational sessions targeting migrant workers in last year</p> <p>Evidence of regional initiative implemented locally</p>	<p>Surveys</p> <p>Reports</p>	<p>Mobile populations reachable</p>

Strategic Objective 4: To reduce the impact (psychological, medical, social, economic and emotional) of HIV infection

Specific Objectives	Targets	Indicators	Means of Verification	Risks/Assumptions
1. To increase accessibility of external support services (medical, social, educational, psychological, spiritual) by children orphaned by HIV/AIDS	<p>1.1 Database or register to identify number of HIV/AIDS orphans is established</p> <p>1.2 Information on all related services is made available to all guardians of orphans</p> <p>1.3 Full access to external support (medical, social, educational, psychological, spiritual) is ensured for all orphans free of charge</p>	<p>Database or register on orphans established</p> <p>IEC material on services produced and distributed to households with orphans</p> <p>% orphans accessing at least one mentioned support services in last year</p> <p>School attendance among orphans</p>	<p>Evidence of database or register</p> <p>Reports</p> <p>Desk surveys</p>	<p>Collaboration of all partners</p> <p>All orphans identified</p>
2. To mitigate the impact of the HIV/AIDS epidemic on sectors and institutions	<p>2.1 Impact of HIV/AIDS on sectors and institutions is established</p> <p>2.2 HIV and STI surveillance is decentralized to peripheral level</p> <p>2.3 The trends of HIV/AIDS/STIs and associated factors are established</p> <p>2.4 Estimates and projections of socio-demographic and economic impact of</p>	<p>Study on the impact of HIV/AIDS on different sectors conducted and results disseminated.</p> <p>Surveillance system created at peripheral level</p> <p>Study of trends conducted and results disseminated</p>	<p>Reports of studies</p> <p>Evidence of expanded surveillance system</p> <p>Institution records/reports</p>	<p>Collaboration of all sectors and institutions</p>

	HIV and AIDS are calculated	Study to estimate projections of socio-demographic/economic impact conducted		
3. To increase the number of HIV positive parents accessing PMTCT Plus and follow them up	<p>3.1 The whole population is sensitised on the availability of PMTCT Plus (+)</p> <p>3.2 All pregnant mothers and their partners are offered the HIV screening test, counselled and encouraged to take the test</p> <p>3.3 All service providers in antenatal care have received appropriate training on PMTCT+</p> <p>3.4 All pregnant mothers testing positive for HIV are provided with antiretroviral therapy, counseling and external support</p> <p>3.5 All babies born to HIV positive mothers have access to treatment, breast milk substitutes and other immediate social support</p> <p>3.6 VCT is integrated in all other health services e.g. Family Planning</p>	<p>% respondents who know that HIV transmission in pregnancy can be reduced by available treatment</p> <p>% antenatal attendees (including partners) accepting the HIV test</p> <p>% antenatal service providers trained in PMTCT+</p> <p>% pregnant mothers testing positive who are provided with antiretroviral therapy counseling and external support</p> <p>% babies born to HIV positive who have access to treatment, breast milk substitutes and other immediate social support</p> <p>% health services with VCT sites</p> <p>% babies born to HIV positive mothers who are HIV negative</p>	<p>Reports</p> <p>Surveys</p> <p>KAPB Study</p> <p>Desk review</p>	<p>Supplies available at all times, including HIV test kits, antiretroviral drugs, breast milk substitutes</p> <p>Trainers updated on latest developments on PMTCT+</p> <p>Collaboration of media and other stakeholders eg health workers</p>

<p>4. To ensure optimal usage of quality Care and Support services by PLWHA and their relatives</p>	<p>4.1 Standards and guidelines for care and support services are established</p> <p>4.2 The whole population is sensitised on the availability of care and support services</p> <p>4.3 The coverage of VCT services is extended to all health facilities</p> <p>4.4 The quality of VCT services is improved in all sites.</p> <p>4.5 All health care providers working in HIV/AIDS care and management are properly trained</p> <p>4.6 Coordination is established between complementary and Western medicine related to HIV/AIDS</p> <p>4.7 Basic care and support services for PLWHAs and their families are decentralised</p> <p>4.8 All equipment and supplies related to HIV/AIDS e.g. Test kits /ARV/Lab facilities/drugs for opportunistic conditions meet quality requirement and their supply is ensured at all times.</p> <p>4.9 Burnout is addressed in health caregivers in HIV/AIDS services</p> <p>4.10 Stigma and discrimination are addressed in all HIV/AIDS related services</p>	<p>Guidelines on quality VCT developed</p> <p>% respondents who know where care and support services are available</p> <p>% health facilities with quality VCT services</p> <p>% facilities meeting internal and external quality assurance requirements</p> <p>% health care providers working in HIV/AIDS care who are trained</p> <p>Evidence of functional coordination mechanism between complementary and Western HIV/AIDS medicine</p> <p>% health facilities with capacity to deliver appropriate basic care and support to PLWHAs and their families</p> <p>% facilities with stock supplies in place eg. Test kits/ARV/Lab facilities /drugs for opportunistic conditions</p> <p>% attrition in HIV/AIDS</p>	<p>Supervisory visits</p> <p>Surveys</p> <p>Reports</p>	<p>Resources available at all times</p> <p>PLWHAs aware of care and support services</p> <p>Funds, including foreign exchange is allocated for purchase of supplies</p> <p>Personnel trained remain in the HIV/AIDS field and practise what they have learnt</p>
---	---	--	---	--

		services % known PLWHAs accessing HIV/AIDS related services		
5. To consolidate safety of Blood Transfusion	<p>5.1 National Blood Transfusion policy and guidelines are developed, disseminated and implemented</p> <p>5.2 Appropriate legislation on blood transfusion is developed</p> <p>5.3 All blood donors are sensitized and counselled to adopt safe practices as regards to HIV contamination</p> <p>5.3 All Blood donation is screened for HIV and other blood borne diseases according to national guidelines</p> <p>5.4 Rapid testing is introduced at mass blood donation activities</p> <p>5.5 All health care practitioners are trained in clinical use of blood</p> <p>5.6 All personnel in blood transfusion services are trained in blood safety and counselling</p>	<p>Evidence of National Blood Transfusion policy in place</p> <p>Evidence of appropriate legislation in place</p> <p>Evidence of appropriate curriculum on blood safety</p> <p>Guidelines for counseling for blood donors developed and utilised</p> <p>% transfused blood screened for HIV according to national guidelines</p> <p>% blood donated at mass activities tested by rapid test</p> <p>% blood donors appropriately counseled prior to donation</p> <p>% health care practitioners trained in clinical use of blood</p> <p>% personnel in blood transfusion services appropriately trained in</p>	<p>Blood Bank report</p> <p>Exit surveys</p> <p>Ward reports</p> <p>Patient records</p>	<p>Sustainability of blood transfusion safety</p> <p>Supplies eg Test kits and Reagents available at all times</p> <p>Guidelines developed on training required</p>

		blood safety and counselling		
6. To strengthen PEP for HCWs and victims of sexual abuse	<p>6.1 IEC materials on infection control, universal precautions and PEP are developed and disseminated to all health care settings</p> <p>6.2 PEP is included and regularly updated in pre- and in-service training of HCWs</p> <p>6.3 All practising medical officers are trained in administration of PEP</p> <p>6.4 Training in procedures on PEP is conducted on a regular basis</p> <p>6.5 All HCWs requiring PEP follow correct procedures</p> <p>6.6 PEP drugs are available in at least one site per region</p> <p>6.7 All PEP drugs are available at all times</p>	<p>% health facilities with updated IEC materials and guidelines on infection control and PEP</p> <p>Evidence of PEP component in curriculum</p> <p>Number of practicing medical officers who administered PEP out of expected</p> <p>Number of training sessions on PEP in last year</p> <p>% PEP record forms adequately filled in</p> <p>% HCWs requiring PEP who followed correct procedures</p> <p>Number of sites with PEP drugs</p> <p>% designated sites with PEP drugs in stock</p>	<p>Supervisory visits</p> <p>Reports</p> <p>Record Forms</p>	<p>HCWs adequately trained in PEP</p> <p>Provision of necessary protective equipment and other supplies, including stationery</p> <p>Reports of accidents are timely</p>

IMPLEMENTING BODIES

10 IMPLEMENTING BODIES

Strategic Objective 1: To create and sustain an environment conducive to a more coordinated and efficient multisectoral response to HIV and AIDS

Specific Objectives	Lead Body	Collaborating Bodies
1.To raise and sustain awareness among the whole population on the epidemic and its impact	Ministry of Health	All government ministries; Youth organizations; Media; NGOs; CBOs; FBOs; private sector; PLWHAs
2. To develop/implement/reinforce legal framework related to HIV/AIDS	National AIDS Council Attorney General's Office	Ministry of Health; Ministry of Social Affairs and Employment; Ministry of Local Government, Culture and Sport; Ministry of Internal Affairs; National Assembly; private sector; Media (specifically SBC and newspapers)
3. To promote multisectoral mobilization and coordination	President's Office; National AIDS Council	All Public and Private Sectors; NGOs; CBOs; FBOs
4. To reinforce the cooperation network at the national, regional and international level	Ministry of Health	Ministry of Foreign Affairs and National AIDS Council; private sector; NGOs; FBOs
5. To encourage greater involvement of the community including PLWHA	National AIDS Council	All sectors

Strategic Objective 2: To reduce the risk factors to HIV/AIDS among young people

Specific Objectives	Lead Body	Collaborating bodies
1. To increase the proportion of young people using condoms in all risky sexual encounters	Youth Division, Ministry of Education and Youth	Ministry of Local Government; NGOs; private sector
2. To develop youth-friendly services	Ministry of Health	Youth Division, Ministry of Education and Youth NGOs; Youth organization; FBOs; CBOs; private sector
3. To reduce the rate and impact of sexual abuse amongst youth	Attorney General	Ministry of Education and Youth; National Council for Children; Ministry of Social Affairs; Ministry of Health
4. To reduce the incidence of HIV/AIDS/STIs among the MSM, CSW, drug users and prison inmates	NGOs (FAHA)	Ministry of Health, DAC; private sector
5. To reduce the rate of new STIs among young people by 50%	Ministry of Health	Youth Department, Ministry of Education and Youth

Strategic Objective 3: To reduce the vulnerability of the young people to HIV/AIDS

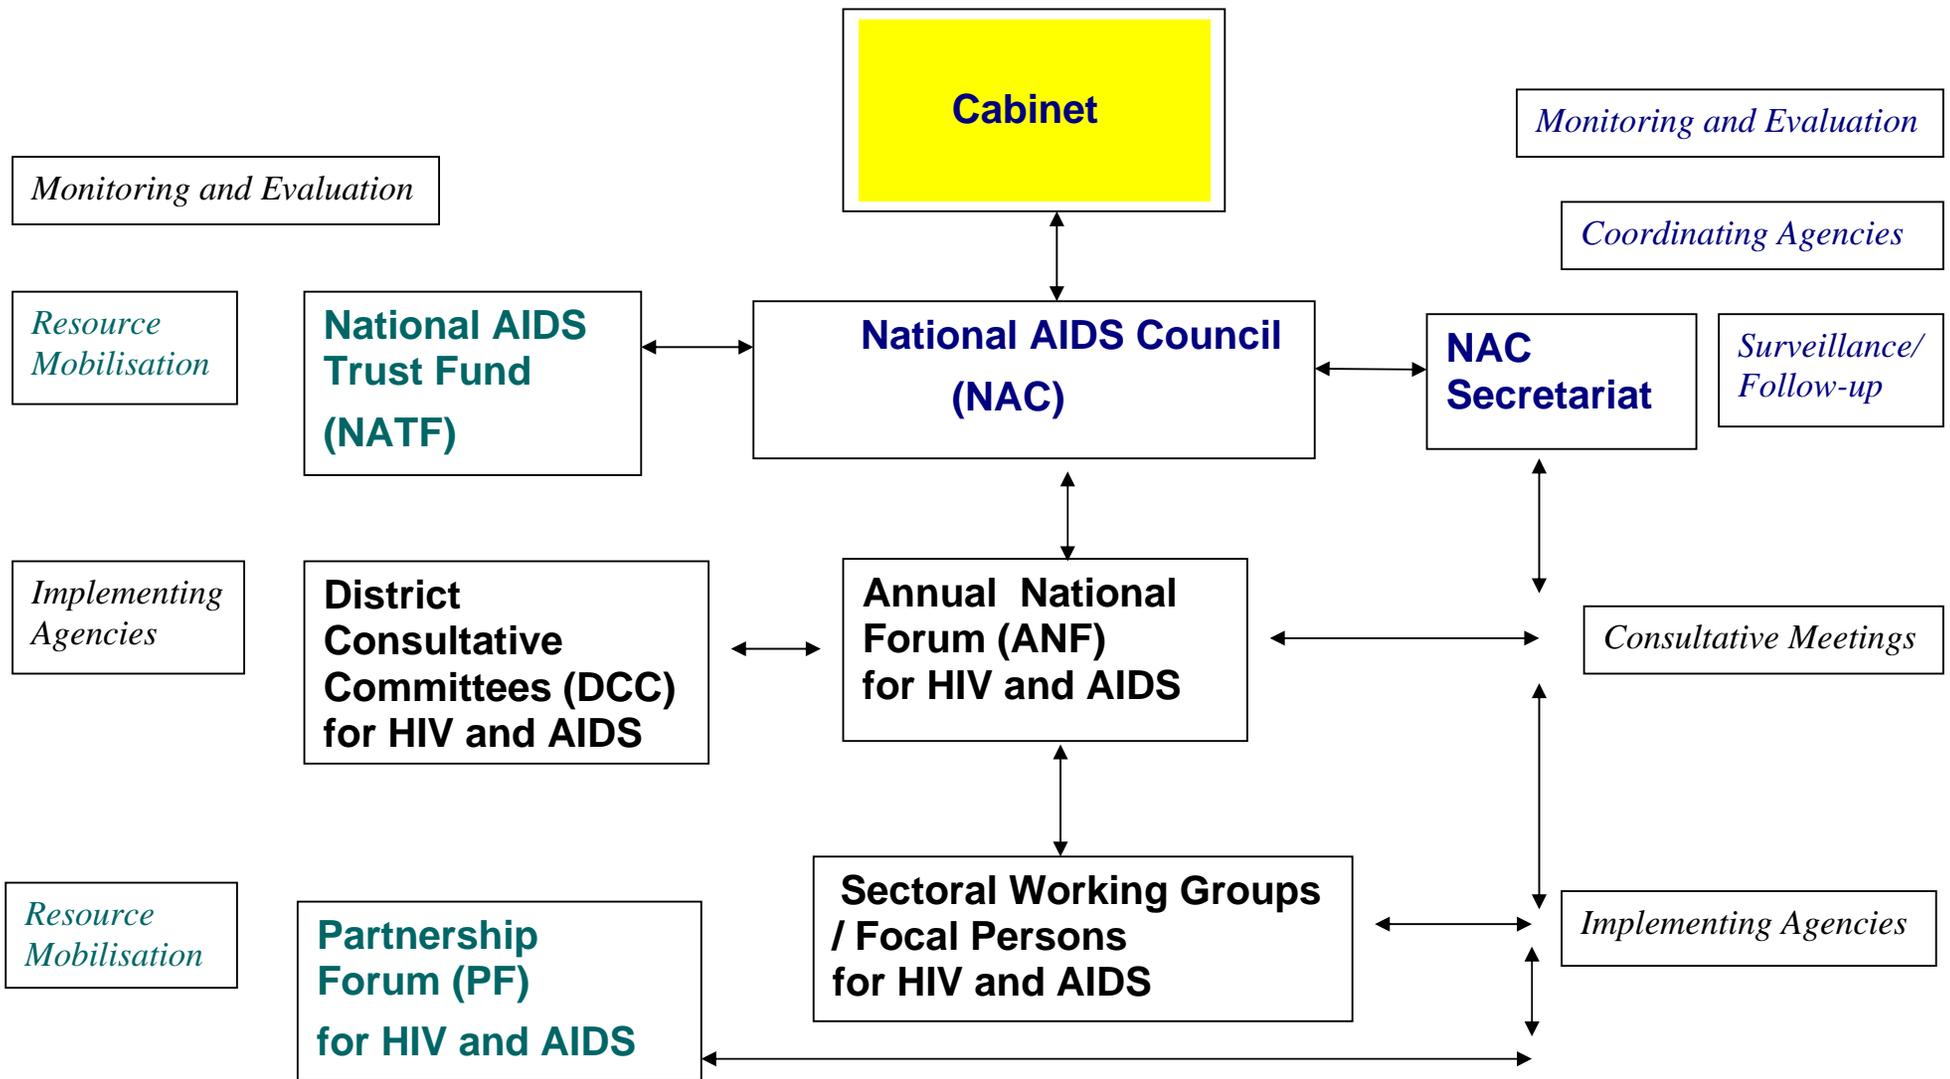

Specific Objectives	Lead Body	Collaborating Bodies
1. To increase the life skills of youth regarding sexual issues	Ministry of Education	NGOs; CBOs; CARE; Scouts; Ministry of Health; National Council for Children; FBOs
2. To reduce the number of young people affected by the effects of dysfunctional families	Ministry of Social Affairs	Ministry of Local Government; Ministry of Education and Youth; FBOs; ASFF; NCC; Family Tribunal
3. To reduce the demand and supply of licit and illicit substances amongst young people	Attorney General	Ministry of Health; Ministry of Internal Affairs; CARE; DAC; Ministry of Education and Youth; FBOs; private sector
4. To reduce HIV/AIDS amongst in mobile populations (sailors, fishermen, travellers) and migrant workers	Ministry of Environment and Natural Resources; Ministry of Social Affairs and Employment	Ministry of Health; Ministry of Social Affairs and Employment; Ministry of Tourism and Transport; Ministry of Environment and Natural Resources; FEAS; SFWU; Apostolat de la Mer; Employers' and Workers' associations; private sector

Strategic Objective 4: To reduce the impact (psychological, medical, social, economic and emotional) of HIV infection

Specific Objectives	Lead bodies	Collaborating Bodies
1. To increase accessibility of external support services (medical, social, educational, psychological, spiritual) by children orphaned by HIV/AIDS	Ministry of Social Affairs	Ministry of Health; Ministry of Education and Youth; NGOs eg ASFF, NCC
2. To mitigate the impact of the HIV/AIDS epidemic on sectors and institutions	Ministry of Social Affairs and Employment	Employers' and Workers' associations; Ministry of Health; all government ministries; NGOs; FBOs; private sector
3. To increase the number of HIV positive parents having access to PMTCT +	Ministry of Health	NGOs (ASFF, FAHA, Fathers' Association)
4. To ensure optimal usage of quality care and support services by PLWHA and their relatives	Faith and Hope Association	NGOs; Ministry of Health; FBOs; private sector
5. To consolidate safety of blood transfusion	Ministry of Health	Red Cross; SMDA; NARS; blood donors
6. To strengthen the PEP for HCWs and victims of sexual abuse	Ministry of Health	Department of Internal Affairs (Police Division); Ministry of Social Affairs

INSTITUTIONAL FRAMEWORK

Figure 9. Framework for HIV and AIDS prevention, care and control activities in the Seychelles
[Please note: Functions of bodies are noted in italics]

11 INSTITUTIONAL FRAMEWORK

11.1 INTRODUCTION

The national strategic plan is a broad document designed to guide the country's response to the epidemic. It is not a plan for the health sector specifically, but a statement of intent for the whole country, both within and outside government. It is recognised that no single sector, ministry, department or organisation is by itself responsible for addressing the HIV epidemic. It is envisaged that all government departments, organisations and stakeholders will use this document as a basis to develop their own operational plans so that all our initiatives as a country can be harmonised to maximise efficiency and effectiveness.

- 1.1 The National Strategic Plan establishes a set of actions that will guide us in the fight against the scourge of HIV and AIDS. Immediate action, motivation to move forwards and commitment are essential if the goals are to be met by Year 2009.
- 1.2 The management of the Plan is primarily the responsibility of the Ministry of Health but is nevertheless also dependent on a wide range of government institutions, non-governmental organizations, the private sector and the civil society.
- 1.3 Accordingly, the responsibility for ensuring the implementation of the Strategic Plan from a holistic and integrated approach will rest at the highest level.
- 1.4 An enhanced framework to support strategic partners in their respective comprehensive but integrated roles and responsibilities, and to follow up on and assess the plan, will be developed taking into account the available structures, facilities and resources.

11.2 IMPORTANT STRUCTURES AT NATIONAL AND DISTRICT LEVELS

The following presents a brief overview of important structures at national and district levels and their specific roles and functions relating to HIV and AIDS. (Refer to Figure 11.)

11.2.1 The Cabinet

The Cabinet is the highest political authority in the country. It consists of all Ministers and is chaired by the President. The Cabinet meets fortnightly. Issues of strategic importance, including HIV and AIDS are discussed and political guidance is given. Matters arising from NAC meetings are submitted to the Cabinet and feature on its agenda every three months. The Cabinet will also ensure that decisions made in NAC are addressed.

11.2.2 National Assembly

The National Assembly should form a committee to address HIV and AIDS issues. HIV/AIDS should not be viewed as just another health problem, but a threat to national development.

11.2.3 National AIDS Council (NAC)

The NAC is being reformed to become a legal body. It will be the highest multi-sectoral body for HIV and AIDS issues. It will be responsible for

- making recommendations on HIV/AIDS policies to the Government;
- verifying that issues pertaining to HIV/AIDS are integrated into the National Development Plan;
- creating and maintaining national commitment to HIV and AIDS;
- ensuring implementation of the projects, programmes and activities of the strategic plan and other policies;
- identifying and recognizing organisations and individuals who contribute towards the fight against HIV/AIDS in Seychelles;
- and liaising with financial stakeholders at national, regional and international levels to ensure availability of sufficient resources to achieve the targets set.

The NAC is a national authority on HIV and AIDS and must be seen as such by the general public. Its decisions must be respected by all sectors. It is responsible for maintaining order, addressing grievances and rebuilding harmony among sectors. It advises government and other sectors on all issues relating to HIV/AIDS, taking into consideration matters arising from the Annual National Forum for HIV and AIDS. Every year, it will create an ad-hoc committee to review the National HIV and AIDS Strategic Plan.

The NAC is chaired by the President or Vice-President, and comprised of Minister of Health as Vice-Chair and all other Ministers, Attorney General and representatives of NGOs, private sector and churches. The support of the President and Vice-President for the fight against HIV and AIDS will be publicly manifested in appropriate ways on specific occasions.

The Government will be represented by Ministers of Health; Education and Youth; Environment and Natural Resources; Tourism and Transport; Economic Planning; Local Government, Culture and Sports; Social Affairs and Employment; Land Use and Habitat; Foreign Affairs; Administration and Manpower; Attorney General, Heads of Departments of Defence and Internal Affairs. The President and Vice-President of the Republic will be co-opted when the need or occasion arises. Other members will be leaders of all political parties, including the Leader of Government Business and Leader of Opposition.

One representative from each of the following sectors will be on the NAC:

Business; People living with HIV/AIDS; Non-governmental organisations; Faith-based organisations; Employers' and Workers' associations; Youth; Hospitality Industry; Men's Association; Women's associations; Children's association; Disabled association

Other relevant stakeholders can be co-opted on NAC as and when necessary.

Its major functions are:

1. Ensuring the timely implementation of the National HIV and AIDS Strategic Plan in Seychelles
2. Advocating for the effective involvement of all sectors and organisations in implementing programmes and strategies

3. Encouraging greater involvement of persons living with HIV/AIDS
4. Ensuring the timely and appropriate flow of information and evidence for decision-making
5. Monitoring of the implementation of the National Strategic Plan in all sectors
6. Creating and strengthening partnerships for an expanded national response to the AIDS epidemic among all sectors
7. Advising the Cabinet on issues pertaining to HIV/AIDS policies
8. Mobilising resources for programme implementation
9. Initiating and/or undertaking policy formulation and joint review

The NAC will meet regularly on a quarterly basis. The functioning of the NAC will be supported by a secretariat here named NAC Secretariat.

11.2.4 National AIDS Trust Fund (NATF)

The National AIDS Trust Fund will continue its role in massive resource mobilization for prevention, control, and care and support for those infected and affected. The NATF will be more visible and active in generation of funds. An annual report will be presented at the National Forum. The NATF will be chaired by the Ministry of Health with alternate chair as the Ministry of Finance. It will meet on a quarterly basis. Membership will be reviewed every two years and will comprise representatives from government, NGOs, CBOs, the medical profession, the private sector and PLWHA associations.

Its terms of reference are:

1. To create national interest and commitment for the prevention and control of HIV and AIDS and the care of those infected and affected;
2. To mobilise resources for HIV/AIDS programmes;
3. To promote and support national programmes on HIV/AIDS

11.2.5 Partnership Forum (PF) for HIV and AIDS

Previously, in the absence of the NAC, the coordination was ensured by the UN Theme Group. It was chaired by the WHO and comprised of governmental organizations, UN funded projects and key stakeholders. With the creation of the NAC proper coordination of national activities is ensured with governmental leadership, making the UNTG irrelevant in its current form. In this respect, the development of a multisectoral approach will bring new challenges and increase resource mobilization activities. In this regard, the UNTG will be replaced by a Partnership Forum comprising representatives of UN agencies and key partners not involved in the NAC. When necessary, non-regular members from government institutions, NGOs and private sector can be invited to provide input to the Partnership Forum.

The functions of this Partnership Forum will be to support the national response in the area of advocacy, resource mobilization and technical assistance.

11.2.6 Annual National Forum (ANF) for HIV and AIDS

A national forum comprising partners who contributed towards the formulation of the Strategic Plan will meet annually at least up to Year 2009. It will air views, discuss progress,

take stock, and suggest and recommend plans of action within the strategic framework. It will thus generate ideas for NAC on issues relating to HIV/AIDS through suggestions and recommendations from the sectoral working groups.

The National Forum will be chaired by the Principal Secretary of the Ministry of Health.

NGOs, faith-based organizations, Police Force, Youth, Children, PLWHA, Trade Unions, the Private Sector and the civil society including Media, celebrities, disabled, alternative care givers and Hospitality Industry have specific but crucial roles in creating the appropriate climate and environment for implementing activities, particularly those usually encountering resistance. Their representatives will be on the National Forum.

The National Forum will meet regularly, on an annual basis, to review the current situation and make appropriate report/recommendations to the NAC.

11.2.7 District Consultative Committees (DCC) for HIV and AIDS

District authorities should designate co-ordinators responsible for HIV/AIDS/STIs in every district. They will be responsible for setting up District Consultative Committees within existent structures which will have representation from all community-based organizations. The DCCs will meet on a quarterly basis to discuss the strategic issues of national and district importance. HIV/AIDS is a standing agenda item where reports from NAC and other bodies are discussed. All District Consultative Committees will participate in the National Forum.

11.2.8 Sectoral Working Groups / Focal Persons for HIV and AIDS

The HIV/AIDS Strategic Plan provides a broad framework for government, NGOs, business, FBOs, youth and all other sectors of society. Each organization and sector must integrate HIV/AIDS in its annual plans, place HIV/AIDS on the normal agenda of regular meetings and develop more specific plans based on their role, activities and specific strengths. Organisations and sectors are encouraged to establish technical AIDS working groups, headed by a focal person.

All the sectors/partners involved in the implementation of HIV/AIDS programmes and projects will designate a focal person to oversee the elaboration of their operational plan and monitoring. This includes facilitating the development of HIV/AIDS workplace policies, ensuring that all departments allocate financial resources to HIV/AIDS and developing minimum HIV/AIDS programmes for each sector.

The Sectoral Working Groups / Focal Persons will be represented on the National Forum where they will liaise with other sectors and report on the monitoring status of their respective programmes and projects.

The Sectoral Working Groups will meet at least once every two months.

The proposed additional role of the organizations and sectors will be as follows:

- Identify determinants of the spread of HIV/AIDS specific to the sector
- Identify strengths and weaknesses with respect to HIV/AIDS

- Identify obstacles to the response within the sector
- Formulate specific HIV/AIDS sectoral plans and budget for their implementation
- Document best practice within the sectors and share information

11.2.9 NAC Secretariat

The functions of the NAC Secretariat will be ensured by the Ministry of Health.

The NAC Secretariat will bring HIV/AIDS issues to the attention of NAC and the National Forum. It will prepare briefing documents for these national forums, and will attend meetings to provide further information to assist decision-making in these national bodies.

It will assist NAC in its deliberations and decisions pertaining to the following areas:

- Prevention
- Care, Counselling and Support
- Information, Education and Communications (IEC)
- Planning, Research, Surveillance, Monitoring and Evaluation
- Blood Safety and Laboratory
- Community Services

It will provide secretarial facilities to the National Forum and will be the two-way link between the National Forum and the NAC, and between the other stakeholders/partners and the National Forum.

The NAC Secretariat will provide guidance and inputs to the sectoral working groups / focal persons.

The Secretariat will, as an executing arm of the Ministry of Health on HIV/AIDS issues, perform strategic activities of national scope e.g. advocacy, resource mobilization, strategic information dissemination, monitoring and evaluation, policy development and strategic planning.

The Secretariat will at the end of each year, evaluate the extent of programme covered in the current year and refer its report to the National Forum for confirmation of findings and advising on actions to be taken to redress shortcomings, if any.

The report will thereafter be examined by the NAC for appropriate recommendations to Government.

At the end of year 2009, the Secretariat will be responsible to carry out a final evaluation to examine the extent to which the priority areas have been addressed and the impact of the programme on the epidemic. However, a mid-way report may be necessary for assessing the actual impact of the programme.

The NAC Secretariat will comprise, in addition to the Ministry of Health, representatives of Ministry of Education and Youth, Ministry of Social Affairs and Employment, PLWHA Associations, Media, NGOs, FBOs and Private Sector.

Figure 9. shows the framework for HIV and AIDS prevention, care and control activities.

12 FUNDING AND BUDGET

The effective implementation of the activities outlined in the Strategic Plan will largely depend on the availability of human, financial and institutional resources. The sustainability of the response will depend on an efficient monitoring process in the area of policy development, institutional strengthening and service delivery.

With a GDP per Capita of USD 8000 and a HDI ranking of 47th, Seychelles does not qualify for debt relief under the HIPC initiative. Over the past ten years, with the high level of social and economic achievement, Seychelles has found it increasingly difficult to access concessionary funding for development and has increasingly had to turn to commercial borrowing to sustain such a high level of development. The high GDP per Capita does not truly reflect Seychelles' level of development, nor its ability to sustain what has been achieved over the past twenty years. A total GDP of USD 700 million is insignificant when compared to most countries.

Seychelles has always maintained that its uniqueness and many constraints it faces as a SIDS must be taken into consideration in order to gain access to concessionary funding so as to sustain its socio-economic development. With the challenge of globalization and HIV/AIDS, it is even more imperative that these constraints are realised by the international community.

Whilst donor assistance flows have shown an absolute decline, certain health programmes continue to receive significant support from multilateral sources. Bilateral and multilateral grants account for 10-12 % of the Ministry of Health's total expenditure, and are mainly in the form of technical cooperation. Funds for HIV/AIDS programmes have been mobilised from many sources. National resource mobilization has been supplemented by allocations from, amongst others, the United Nations, French and Indian Governments, for both prevention and treatment, including purchase of antiretroviral therapy, training of health personnel and provision of technical assistance.

Monitoring of resources is done by internal and external auditing commissioned by both government and donor agencies.

Funding and resource mobilisation mechanisms for HIV and AIDS include the following:

- Government (inc. AIDS Programme management, treatment, prevention, M&E)
- National AIDS Trust Fund (Please see 5.2 Structures in place for coordination)
- Bilateral cooperation: French and Indian governments
- Multilateral cooperation: WHO, UNFPA, UNDP, UNAIDS, Indian Ocean Initiative (with COI, UNAIDS, UNDP, WHO)
- Partnership Forum (to be created)
- Civil society

Resources allocation for the past couple of years is summarized in Section 5 on Response Analysis, Figure 8 Page 21.

Most of the existing NGOs in Seychelles are primarily involved in awareness raising activities relating to population issues, which include HIV/AIDS. Some NGOs receive financial assistance from government. Civil society actors, for example faith-based organizations, receive significant financial and in-kind contributions for specific projects from both local and international partners. In some cases, these organisations implement various projects through member contributions and fundraising activities.

A national proposal submitted to the Global Fund for AIDS, TB and Malaria in the Second Round was not successful. Nonetheless, to make a significant difference in the epidemic over the next 5 years in Seychelles an estimated US \$ 20 million is required.

Funds for HIV/AIDS will be devolved to districts and sectors from the national government on condition that certain standards are met. These include the:

- Integration of HIV/AIDS in district consultative committees and sectoral working groups
- Commitment to distribute funds according to the HIV/AIDS Strategic Plan
- Commitment to spend over 80% of the funds in one financial year
- Commitment to roll funds over into the new financial year without risk of penalty
- Commitment to prioritise the process of HIV/AIDS spending within the districts and sectors
- Commitment to ongoing national, regional and inter-district communication
- Regular review of the implementation of HIV/AIDS Plans
- Establishment of realistic goals and objectives that can be implemented within regions and districts or sectors

Human Resources

It is vital for the success of the Strategic Plan that adequate human resources are available to ensure delivery. Seychelles is a small country with a limited number of human resources. The ratio suggested is one dedicated employee per 1,000 population. To evaluate the availability of human resources, it will be necessary to audit the existing human resources at national, regional and district levels. The audit should assist in establishing standards of personnel at district, regional and national levels of management. Capacity building to enhance human resource development is a crosscutting issue in all the objectives.

Teachers will be utilised as resource persons to reach the youth and children; focal persons in workplaces and health professionals will reach other groups.

The NAC members will delegate activities to their respective sectors and report back periodically. They will receive information and training on HIV/AIDS at each meeting and plans will be made to cover the pertinent aspects of the Strategic Plan.

Budget

A detailed budget of the National Strategic Plan is attached.

13 MONITORING AND EVALUATION

The HIV/AIDS Strategic Plan must be reviewed periodically at national, sectoral and district levels. Monitoring done quarterly, yearly and after five years will ensure that activities are being implemented according to the plan and that all partners contribute to the accomplishment of policy objectives. All stakeholders, including the MOH, will submit quarterly reports to NAC on their HIV/AIDS activities.

A mechanism of constant and consistent reporting by districts and sectors to national structures and vice versa will be developed. Information from the regular review of successes or failures will be used to serve as a communication tool among stakeholders to provide guidelines on appropriate activities in which to be involved.

The NAC Secretariat has overall responsibility for the implementation of the Strategic Plan. The specific measurable targets and indicators developed for each objective will be used to monitor the Strategic Plan. Each year, programmes will be evaluated in terms of process and output indicators and findings disseminated to the NAC and general public. Adjustments will be made accordingly. Additional monitoring will include national, regional and district surveys. A national behavioural survey in 2007 will measure changes in HIV related risk behaviours including condom use, delay of sexual initiation among youth and the number of sexual partners. In cases where capacity is insufficient to establish and maintain a system(s) to produce baseline data and M&E indicators, consultants will be recruited and partners solicited to meet resource requirements.

Effective monitoring and evaluation tools will be developed and customised for each intervention. These tools will identify strengths and weaknesses in the response programmes and activities, and areas that need the redirection of resources. Programme coordinators and focal persons of sectoral working groups shall be responsible for assigning collection and analysis of data. Results shall be periodically disseminated to the NAC through the Principal Secretary for Health. Quality control and validation of data will be ascertained through review of progress meetings. M&E data will be utilized to establish baseline for future comparison and to develop guidelines and policies.

The activity should be seen as mutually beneficial for the implementing agencies to assess their performance and seek corrective measures, and for government to formulate appropriate policy. The cost effectiveness of selected interventions will be determined through operational research.

In order to better involve the target population in the M&E process, at the end of each educational activity, participants will be required to fill in a questionnaire to provide feedback on the sessions. Also, demographic surveys will consider the target populations.

14 ANNEXES

Annex 1: List of Participants of Sectors and Major Contributors to the Strategic Planning Process

Anglican Diocese

Christine Benoit, Deacon

Attorney General's Chambers

Laura Pillay, State Counsel

Faith and Hope Association

Joseph Rath, Chairperson

Reginald Hoareau, Secretary

Liaison Unit of Non-Governmental Organisations, (represented by ASFF)

Rose-Mary Dogley, Administrative Officer

Ministry of Education and Youth

Bernadette Sifflore, Coordinator, President Award Programme, Youth Department

Colette Servina, Health Coordinator, Education Department

Ministry of Finance

Francesca Abel, Statistician

Ministry of Foreign Affairs

Kenneth Racombo, Economist

Ministry of Health

Anne Gédéon, AIDS Programme Manager

Christiane Jeannevole, Senior Nursing Officer, Praslin Hospital

Fred Arissol, Senior Medical Officer, CDCU

Georgette Furneau, Coordinator, CDCU

Georgianna Marie, Health Educator, AIDS IEC

Joachim Didon, Director Health Information Section

Judie Brioche, Coordinator, Youth Health Centre

Monica Servina, Director General, Health Education and Promotion

Shobha Hajarnis, Technical Advisor to the Principal Secretary

Ministry of Local Government, Sports and Culture

Maureen Jouanneau-Andre, Programme Development Officer, Neighbourhood Recreational Activities

Ministry of Social Affairs & Employment

Jane Victor, Research Officer

Jimmy Finesse, Senior Employment Officer
Pascal Marie, Senior Research Officer

Roman Catholic Church

Rev John Gappy, Vicar of the Cathedral

Seychelles Federation of Workers' Unions, SFWU

Sylvia Stravens, Sector Secretary for Education

World Health Organisation, WHO

Rui Gama Vaz, WHO Liaison Officer

Technical Advisory Committee for HIV/AIDS/STIs (MOH) TAC

Agnes Chetty, Senior Medical Officer, CDCU

Anne Gédéon, AIDS Programme Manager

Anselmine Cafrine, Assistant Director, Community Health Services

Danielle Barra, Pharmacist

Fred Arissol, Senior Medical Officer, CDCU

Georgette Furneau, Coordinator, CDCU

Georgianna Marie, Health Educator, AIDS IEC

Jude Gedeon, Director General, Disease Prevention and Control

Justina Hollanda, Technologist, Blood Transfusion Unit

Marianna Toussaint, Senior Technologist, Public Health Laboratory

Patrick Herminie, Ex-Director General, Disease Prevention and Control

Rui Gama Vaz, WHO Liaison Officer
